Details

Target Description	Receptor expression-enhancing protein 1, Receptor Accessory Protein 1 or REEP1 is encoded by the gene REEP1. The REEP protein family is made up of six REEP proteins 1-6. REEP1 is a mitochondrial protein that links ER tubules to the cytoskeleton and is involved in ER formation and remodeling. REEP1 is expressed in brain, spinal cord and testes. It is also expressed in olfactory sensory neurons and may play a role in the cell surface expression of odorant receptors. Diseases associated with this gene include Spastic Paraplegia distal hereditary motor neuropathy type V. Ref: Brain Res. 2014 January 30; 1545: 12–22. doi:10.1016/j.brainres.2013.12.008
Specificity	Does not cross-react with REEP2
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.

Quality Control Tests

Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.

Storage

Aliquot and store at $\leq -20^{\circ}\text{C}$ for long term storage. For short term storage, store at $2-8^{\circ}\text{C}$. For maximum recovery of product, centrifuge the vial prior to removing the cap.
