Details

Target Description	Bardet-Biedl syndrome 5 protein or BBS5 is encoded by the gene BBS5 and is one component of the BBSome, a complex of proteins that regulates the protein composition in cilia. The BBSome complex is thought to function as a coat complex required for sorting of specific membrane proteins to the primary cilia. BBS5 is expressed in many tissues including brain, heart, eye, kidney and testes. Diseases associated with BBS5 include Bardet-Biedl Syndrome 5 and Bardet-Biedl Syndrome.
Specificity	No cross-reactivity reported
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.
