Details

Target Description	Neuronal Cell Adhesion Molecule is encoded by the gene NRCAM. NRCAM is a member of the immunoglobulin superfamily, L1/neurofascin/NgCAM family. NRCAM is an ankyrin-binding protein that is involved in neuron-neuron adhesion and promotes directional signaling during axonal cone growth. NRCAM also may play a role in cell-cell communication via signalling from its intracellular domain to the actin cytoskeleton during directional cell migration. NRCAM is expressed in the brain. Diseases associated with NRCAM include Masa Syndrome and Autism.
Specificity	No cross-reactivity reported
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern.
