Details

Target Description	GABA A receptors are members of the Cys-loop family of ligand-gated ion channels. GABA AR-beta2/3 a is a subunit of the pentameric GABA receptors where GABA is the major inhibitory neurotransmitter in the vertebrate brain and mediates neuronal inhibition by binding to the GABA receptor and opening an integral chloride channel. GABA AR beta2/3 has been found to be expressed in brain at the cell junction, synapse, postsynaptic cell membrane and cytoplasmic vesicle membrane.
Specificity	Cross-reacts with GABA-A-R-Beta2 Does not cross-react with GABA-A-RBeta1
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.
