## Details

<b>Target Description</b>	Leucine Rich Repeat Transmembrane Neuronal 2 is encoded by the gene LRRTM2. LRRTM2 is a member of the LRRTM family. LRRTM2 is involved in the development and maintenance of excitatory synapses in the vertebrate nervous system. LRRTM2 regulates surface expression of AMPA receptors and instructs the development of functional glutamate release sites. LRRTM2 is expressed in neuronal tissues. Diseases associated with LRRTM2 include Histrionic Personality Disorder.
<b>Specificity</b>	Does not cross-react with LRRTM1
<b>Purification Method</b>	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
<b>Quality Control Tests</b>	Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.
