Details

Target Description	ATP-sensitive inward rectifier potassium channel 11 or Kir6.2 is encoded by the gene KCNJ11. Kir6.2 is an integral membrane protein which has a greater tendency to allow potassium to flow into a cell rather than out of a cell, is controlled by G-proteins. Kir6.2 has broad expression in many tissues including brain, heart, pancreas (beta cells) and thyroid. Diseases associated with this gene include several forms of diabetes.
Specificity	Does not cross-react with Kir6.1
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern.
Storage	Aliquot and store at ≤ -20°C for long term storage. For short term storage, store at 2-8°C. For maximum recovery of product, centrifuge the vial prior to removing the cap.
