Details

Target Description	Glutamate receptor ionotropic, NMDA3A, N-Methyl-D-Aspartate Receptor Subtype 3A or GluN3A is encoded by the gene GRIN3A. GluN3A is a subunit of the N-methyl-D-aspartate (NMDA) receptor, which is a subtype of channel forming ionotropic glutamate receptor which is permeable to cations including calcium, potassium and sodium. GluN3a is expressed in the CNS especially in development and appears to play a role in delaying synapse maturation. Diseases associated with GRIN3A include Macroductyly
Specificity	No cross-reactivity reported
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern.
