Details

Target Description	Alkyldihydroxyacetonephosphate synthase, peroxisomal or AGPS neo-epitope is encoded by the gene AGPS. AGPS is a member of the FAD-binding oxidoreductase/transferase type 4 family and is an enzyme involved in ether lipid biosynthesis. Diseases associated with this gene include forms of Rhizomelic Chondrodysplasia Punctata.
Specificity	Does not cross-react with unprocessed AGPS
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.
Storage	Aliquot and store at ≤ -20°C for long term storage. For short term storage, store at 2-8°C. For maximum recovery of product, centrifuge the vial prior to removing the cap.
