Details

Target Description Vasoactive Intestinal Peptide (VIP) or PHM27 is encoded by the gene VIP and belongs to the

glucagon family. VIP is a secreted peptide hormone and binds to the VIP receptors VIP R1 and VIP R2. Signaling through the receptors, VIP is involved diverse processes including vasodilation, regulation of blood pressure, stimulates myocardial contractility and neurotransmission. VIP is produced in many tissues including gut, pancreas, heart and brain. Diseases associated with this

gene include Vipoma and Vasomotor Rhinitis.

Specificity No cross-reactivity reported

Purification Method Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity

chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.

Quality Control Tests Each new lot of antibody is quality control tested by IHC on either rat or mouse brain and

confirmed to give the expected staining pattern.
