Details

Target Description	Neuropeptide Y is encoded by the gene NPY. NPY is a member of the NPY family. NPY is a neuropeptide that influences many physiological processes including cortical excitability, stress response, food intake, circadian rhythms, and cardiovascular function. NPY functions through G protein-coupled receptors to inhibit adenylyl cyclase, activate mitogen-activated protein kinase (MAPK), regulate intracellular calcium levels, and activate potassium channels. NPY is widely expressed in the central nervous system. Diseases associated with NPY include Eating Disorder and Adjustment Disorder.
Specificity	No cross-reactivity reported
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested by IHC on either rat or mouse brain and confirmed to give the expected staining pattern.
