Details

Target Description	Nitric Oxide Synthase 1 is encoded by the gene NOS1. NOS1 is a member of the NOS family. NOS1 synthesizes nitric oxide from L-arginine, which acts as a biologic mediator in several processes, including neurotransmission, and antimicrobial and antitumoral activities. NOS1 is expressed ubiquitously, with high levels of expression in skeletal muscle. Diseases associated with NOS1 include Achalasia, Familial Esophageal and Pyloric Stenosis, Infantile Hypertrophic, 1.
Specificity	No cross-reactivity reported
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.
