| Target Description | Rho guanine nucleotide exchange factor 9 or Collybistin is encoded by the gene ARHGEF9. Collybistin is a guanine nucleotide exchange factor (GEF) and is a member of the Rho-like GTPase family. Collybistin functions to cycle active GTP to inactive GDP. Collybistin is involved in microfilament regulation and clustering of some GABA receptors and It is expressed in brain at postsynaptic membranes. Diseases associated with ARHGEF9 include Early Infantile Epileptic Encephalopathy and Hyperekplexia. |
| Specificity | No cross-reactivity reported |
| Purification Method | Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody. |
| Quality Control Tests | Each new lot of antibody is quality control tested by IHC on either rat or mouse brain and confirmed to give the expected staining pattern. |
