Details

Target Description	Potassium voltage-gated channel modifier subfamily G member 1 is encoded by the gene KCNG1. KCNG1 is a member of the potassium channel family, G (TC 1.A.1.2) subfamily, Kv6.1/KCNG1 sub-subfamily. KCNG1 is a potassium channel subunit that does not form functional channels by itself. It can form functional heterotetrameric channels with KCNB1. KCNG1 modulates the delayed rectifier voltage-gated potassium channel activation and deactivation rates of KCNB1. KCNG1 is expressed in skeletal muscle. Diseases associated with KCNG1 include Colon Small Cell Carcinoma and Fragile X Syndrome.
Specificity	No cross-reactivity reported
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern.

Storage
