Ring Top Offset

Gallagher's patented Ring Top head technology provides a convenient, robust and safe offset solution to protect your fence against damage from livestock.

- Eliminate risk of shorting
- Simple to install
- Long life, UV protected

Available in multiple sizes for all applications.

A close-up photograph of a person's hands working on a wooden fence. The person is using a hammer with a blue handle and a white ring-top tool to install a post. The background is a blurred outdoor setting with a house and a lawn.

The Ring Top Solution...

When we first launched the Ring Top Post we redefined the traditional pigtail fence standard. Through customer inspired design the “wear proof and tangle proof” features of the Ring Top head, solved farmers many frustrations with conventional pigtails.

These benefits have now been built into the new Gallagher offsets, addressing the frustration of pigtail offset products:

- Glass filled nylon head with no metal centre eliminates possibility of fence faults
- No protruding parts, minimises risk of animal injury if contact is made

Mounting Options

SIZE OPTIONS

MULTIPLE SIZES FOR YOUR APPLICATION

Ranges from 175mm to 400mm with top or side mount and double end options.

SIDE MOUNT:

175mm **400mm**
G75112 G75122

TOP MOUNT:

250mm **400mm**
G75132 G75142

DOUBLE END:

800mm (400mm each side)
G75152

SUPERIOR ANIMAL SAFETY

Patented Ring Top head has no protrusions to minimise risk of injury

SIMPLE TO INSTALL

Easily drive into wood posts and secure with a staple

CONFIDENCE IN PERFORMANCE

Quality design and materials backed by a 5 year warranty

LONG LIFE DURABILITY

UV protected GF nylon head with corrosion resistant electro plated shaft

ELIMINATE RISK OF SHORTING

Prevent wear through and cracking with glass filled (GF) nylon head and no metal within it

A sting in the tail

Live Tip Offsets

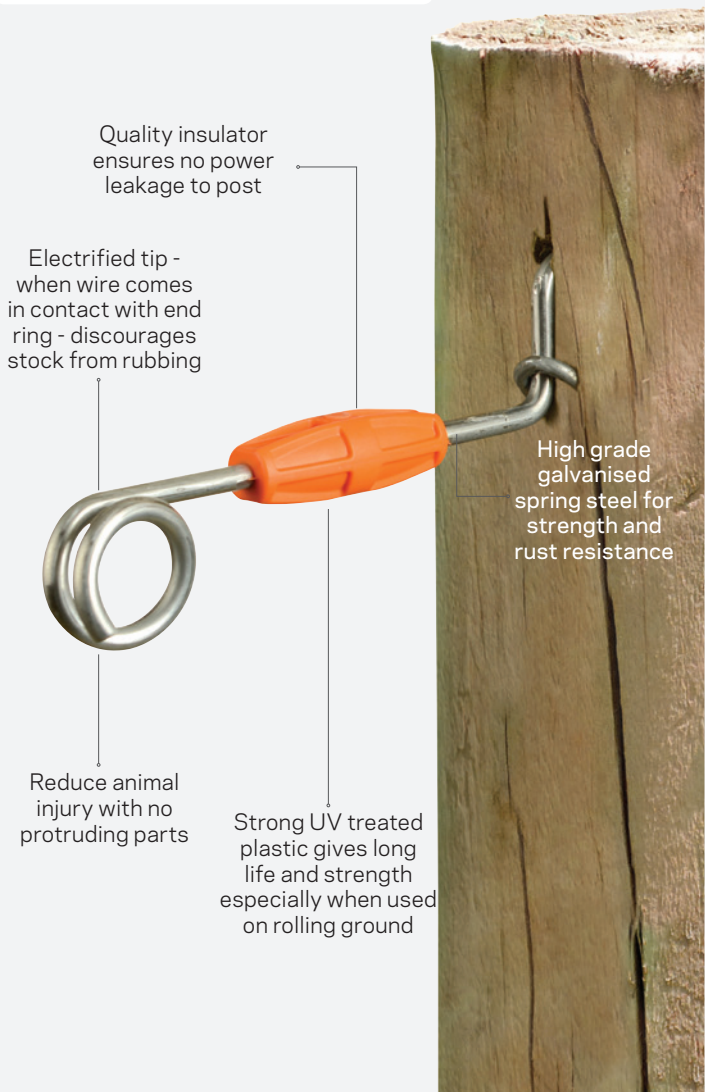

- Unique electrified tip discourages stock from rubbing against offset
- Quality insulator means no power leakage to post
- UV treated plastic gives long life and strength
- Reduced animal injury with no protruding parts
- High grade galvanised spring steel

Live Tip Offsets

With an electrified tip and zero power leakage through the post, the Live Tip Offsets are an effective, new option for protecting existing fences.

Quality insulator ensures no power leakage to post

Electrified tip - when wire comes in contact with end ring - discourages stock from rubbing

High grade galvanised spring steel for strength and rust resistance

Reduce animal injury with no protruding parts

Strong UV treated plastic gives long life and strength especially when used on rolling ground

Post Options

WOOD POST

Sharpened end to drive into post.
