1. Adjust the seat post to the markings on the post of the saddle.

2. If you have to remove the front wheel of your bike, follow the steps provided in the manual to detach it from the bike.

3. The performance and mileage of the unit will be varied with the battery condition, road riding, and the front and back wheels.

4. Ensure that the handlebar is set to the correct hand signals when turning or stopping. If you do not know the proper hand signals, it is important you learn them before riding on the road.

5. Be sure to check the valve stem to see if it is straight in the rim.

6. Your rims should always be smooth and without cracks. If there are any breaks, replace them immediately.

7. Irregular tires should be replaced immediately.

8. Wheels should be centered in the fork or dropouts. If you hear any irregular noises when you spin the wheel, check the spokes for any issues.

9. When cleaning your electric bike, do not use a steady, direct, stream of water from a garden hose. This can damage the electrical components of the bike.

10. The battery won’t go flat suddenly brake in the rain or on slippery surfaces.

11. When going downhill, do not turn the power off. Continue to pedal and maintain control of the bike.

12. Dismounting Battery Case

   - Power off the bike first and connect the charger with the bike.
   - Adopt the correct charger.
   - Remove the front wheel and then pull the battery out of the frame.
   - Lock the Charger.

13. When battery meter indicates low power remaining, switch to manual power and get help before the battery goes flat.

14. You are able to adjust the amount of assistance on the LCD screen by adjusting the switch the key to horizontal (flat).
