

## ***Just Stack It! – The Stacked Bracket Advantage***

**Stacked Brackets** provide a perfect connection for the support of the platform weight. All loads are transferred directly into the platform legs, not supported by the screws. The screws only allow the bracket to hold the pieces in place and do not support the load. ***This is as good as it gets for design to support the weight.***

All **Just Stack It!** brackets connect with self-starting screw, **NO predrilling** is required, like you would have to do if you connected two 2x4's together with screws alone. Plus, if you connect two 2x4's together side-by-side with screws, the weight is supported by the screws, definitely not as secure. Our brackets also help you line up and hold the pieces with 'L' tabs as you do the assembly.

**Just Stack It!** Loading Platforms are well designed, easy to assemble, and everything is reusable.
