

Touch RFID Lock

Badge Compatibility Guide

This locking option, featuring the Digilock® Versa Mini, operates on RFID iClass and Mifare (13.56 MHz). It's ideal for facilities with existing electronic credentialing systems. Simply touch a security badge or fob against the sensor, then turn the knob to open. Each lock can be programmed to provide or limit access to specific users as needed.

Use this guide to determine if your facility's current security badges will work with our Touch RFID locks.

Hardware Solution

Custom locks can be purchased with an HID encryption reader to allow our RFID lock to work with your existing badges.

Note: Subject to increased costs, order minimums, and potentially longer lead times.

Purchase a separate Mifare badge that can be added to employee lanyards or a Mifare sticker to adhere to existing badges.

Note: Mifare stickers should be tested to ensure they do not interfere with other RFID readers within a facility (e.g., copiers, door-entry access, turnstiles, etc.). Our sales reps can provide a sample sticker for testing purpose.
