

Shelf and Retainer Bar Installation

CarePod™ shelves and retaining bars are mounted into vertical rails and can be installed and repositioned easily without tools. Shelves can be oriented with the lip turned down or with the lip turned up to secure items placed on shelf.

To Install

To insert a shelf or retaining bar, insert the hook end into the slots on the vertical rail. Then push downward to lock into position. To remove, lift up to release and pull straight out to remove.
