# Portable Home Use Maglev Spot Mole Removal Pen

## Feature

1. Type: Rechargeable
2. Function: It produce high-frequency current, biological tissue can be cut and carbonized. It can be use for skin beauty.
3. Security: conform to GB9706.1-1995, GB9706.4-1999, YY0322-2000

## Operation

1. Clean face ,apply the anesthesia
2. Sterilize face
3. Needle disinfect ( needle immerse in disinfectant for 5-10 minutes)
4. Do treatment ( we have videos to show you how to operate)
5. After treatment, if needle have any carbide, use knife scrape it or sand paper rub it.
6. Needle should be disinfected before use .

## Plasma Freckle removal pen work principle

Similar to carbon dioxide (CO2) laser beauty machine, it uses new generation of plasma micro district discharge technology with low temperature and high frequency , which is efficient capacity conversion material and chip control . when the needle touch the freckle skin,it produce plasma with high temperature as 2000°C immediately, and carbonize the spot freckle , then remove it.

When the needle touch the freckle spot ,it will produce a small flame,which is different from common flame.The micro vascular will be solidified quickly without bleeding during the treatment. Then it will form carbon scabs ,protect wound skin from infection. After about 1 week, scab will shed without scar.

## Advantage

- ★ Remove completely: instantly eliminate skin neoplasms and strong sterilization and never relapse
- ★ No bleeding: can avoid various lesions caused by bleeding and medical risk
- ★ Wound easy to recover without bandage
- ★ No scar left
- ★ Ease use: it can work for about 2-3 hours after 1 time charge.
- ★ Economical and practical: it is cheap and needle can reuse.
- ★ Easy to take

Medicine showed that: Plasma has a great Blood Coagulation function, it can be used to remove pigment nevus, flat wart, wart, syringoma, corns, such as skin neoplasms, the curative effect of the plasma is superior to laser, electricity ion corrosion, freeze, drug treatment, etc

## Function and Usage

Skin beauty: verruca vulgaris, senile warts, flat wart, contagious soft wart, verrucous nevus, and sebaceous nevus, granuloma, millet papules, eyelid xanthoma, leather fat, all kinds of pigmented nevus, corns and calluses, freckles, etc.

## Transportation, storage, storage conditions, machine lifetime

This machine is an electronic instrument , please do not serious shake, collide or rain when delivering drip in transit GB/T191 – 2000

Environmental temperature: -40 °C ~ 55 °C

Relative humidity: 10% to 95%

Atmospheric pressure: 500 kpa to 1100 kpa

Environment surroundings : non-corrosive and less dust.

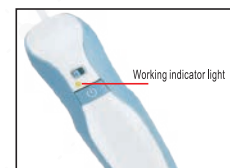

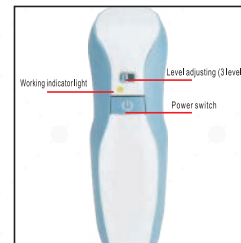

## Working Condition

Voltage: AC110V/60HZ AC220V/50HZ

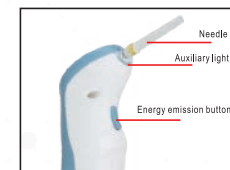

Frequency: 1.1MHz±0.3MHz

## Instrument operation

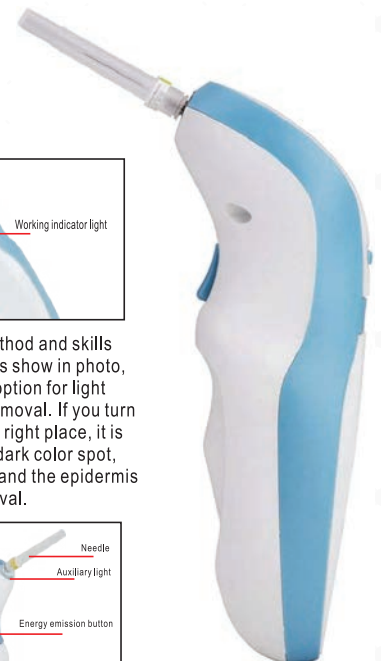

1. Charge: connect the power line to the machine, charge two hours can be used about 10 - 15 days normally.

2. Operation method and skills  
If button to left as show in photo, it is low energy option for light color pigment removal. If you turn the button to the right place, it is high energy for dark color spot, pigment, nevus and the epidermis meat mole removal.

3. Turn on the machine, press the energy button, the light is on. When the needle close to the skin distance as about 1 mm, it will release energy automatic.

# PLASMA GEL MAKER / BIO-FILLER MAKER

## Application:

Bio filler equipment for acne scar, wrinkle removal PRP/PPP filler & plasma gel filler. Converts Platelet Rich Plasma into a Bio Gel for facial & Corporal Fillings.

## Operation Principle:

Filler maker making fillers after incubating plasmas by using heating system. Filler can make biofiller in two step process. It proceeds controlled heating and cooling by bio filler maker.

## Parameter setting:

Activate incubating and cooling process, after setting the timer to 3 minutes at 70 °C, 10 minutes at 90 °C.

# EZ INJECTOR

EZ-1000

Main function: assist in importing, water-light needle and many kinds of products can be injected quantitatively and at a constant speed

Charging: built-in lithium battery 8.4V DC/500MAMAX

Output: AC100-240V (50/60HZ)

Input material: host, negative pressure handle, charging base is made of ABS plastic material, negative pressure tube is silicone

Weight: 220g host (including fixed head), negative pressure handle 100g

Size: host 153\*38\*35

Negative pressure handle: 170\*70\*48MM

Display: 1.5 inch full color OLED

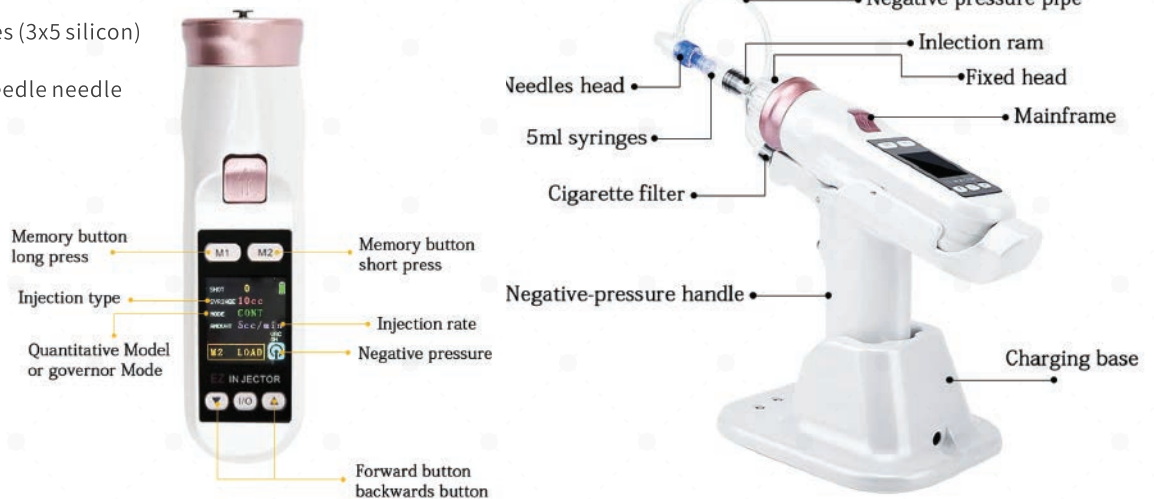

Power operation: manual switch according to the button or automatic shutdown within 5 minutes without operation

Mode: Constant speed (CONTINUOUS), quantitative (DOSE) injection

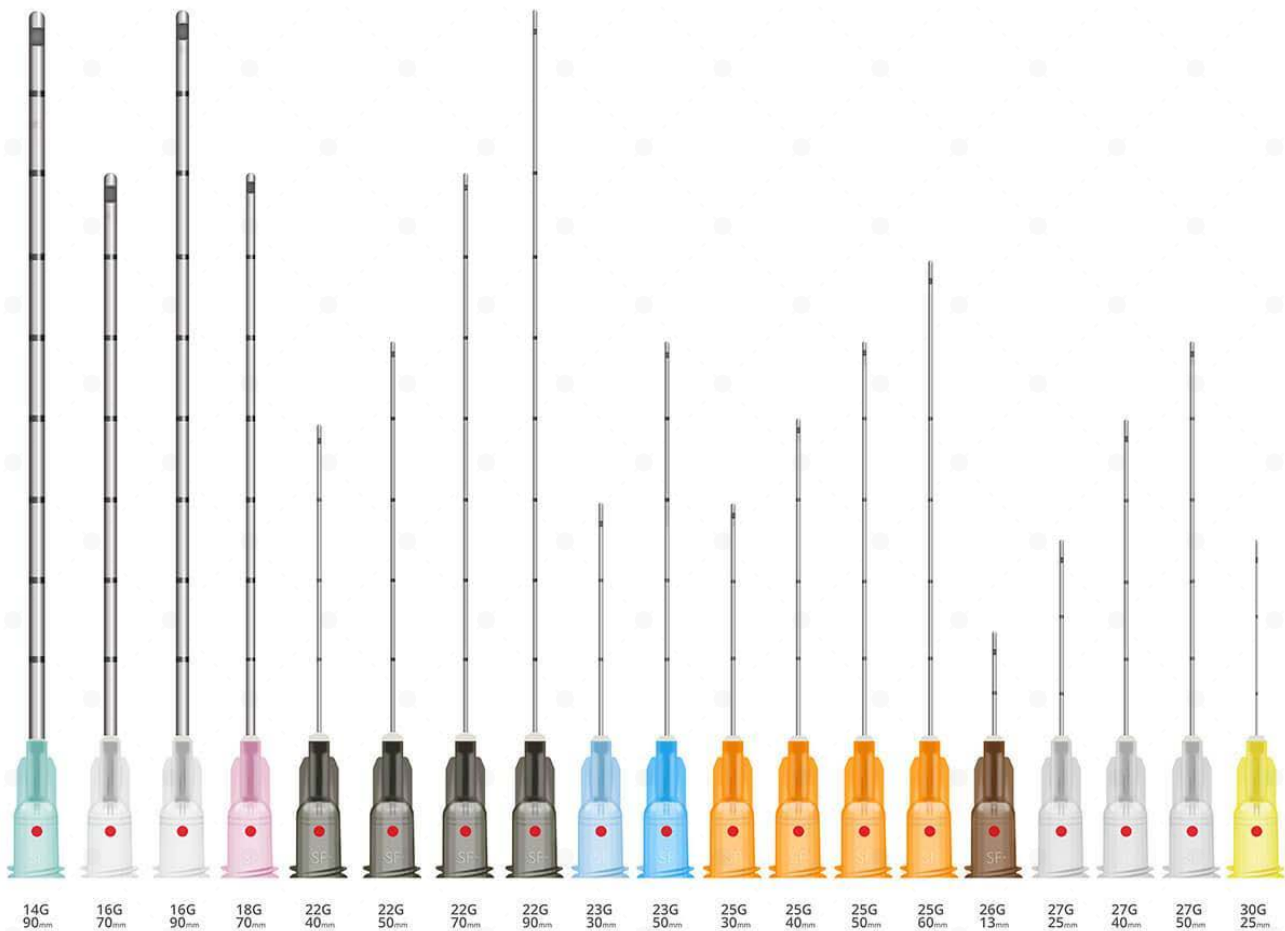

Settings: 5 gears in constant speed mode, 6 gears in quantitative mode

- Product name: EZ INJECTOR
- Model: EZ-1000
- Main functions: Assisting the quantitative and constant-speed injection of hyaluronic acid and other products
- Power supply: built-in lithium battery 7.4V,850mAH
- Charger: lithium battery 8.4V DC/500mAm output, AC100~240V(50/60Hz) input
- Charging: After being fully charged, use negative pressure function for about 2000 times at most
- Power consumption: maximum 4W
- Material: the main machine, negative pressure handle and charging base are made of plastic, and the injector fixing head and filter tip are made of polycarbonate for injection. The piston is made of nickel plated material, and the negative pressure pipe is silicon pipe.
- Weight: main machine 220g (including injection fixing head), negative pressure handle 100g
- Size: Host:— 153x38x38mm  
Negative pressure handle-170 x 70 x 48 mm
- Display: 1.5-inch full color OLED
- Powersupplyoperation: switch manually according to the button or shutdown automatically if there is no operation within 5 minutes
- Mode: constant speed (continuous), quantitative (dose)
- Injection setting: 5 degrees of constant speed mode,
- Basic accessories:
  - 1) negative pressure handle
  - 2) There are two kinds of injection pistons: 1cc (basic installation), 3cc, 5cc and 10cc for general use
  - 3) Charging base
  - 4) Special charger
  - 5) There are two kinds of syringe fixing heads: 1~3cc, 5~10cc
  - 6) Charging adapter
  - 7) Two negative pressure pipes (3x5 silicon)
  - 8) One filter tip
  - 9) One negative pressure 5-needle needle
  - 10) A 5ml needle tube

# DERMAL CANNULA

A cannula in this context is a blunt-tipped, hollow tube that functions as an alternative to a needle when administering dermal fillers. Dermal fillers (such as those sold under the Juvéderm brand name) have traditionally been administered using sharp-tipped needles.

- CENTIMETRIC GRADUATION ALONG THE STAINLESS STEEL TUBE FOR A SYMMETRICAL DEPTH OF INJECTION
- SURFACE TREATMENT TO ALLOW A PERFECT SLIDING INTO SKIN
- EXTRA-LARGE INTERNAL CALIBRE TO REDUCE INJECTION PRESSURE
- RED DOT ON HUB INDICATING THE LOCATION OF SIDE ORIFICE FOR A PRECISE INJECTION. AND OF COURSE, THESE NEW FEATURES OF THE PRECISION RANGE COME IN ADDITION TO ALL THE ADVANTAGES OF MICRO-CANNULAS
- 20 PER BOX - WITH INDIVIDUAL STYLETS FOR OPENING THE SKIN INCLUDED WITH EACH CANNULA.
