HEMP: HISTORICAL REFERENCES

Hemp is renowned for having therapeutic benefits that can help with hunger stimulation, constipation relief, and sleep improvement. It is used medicinally in Ayurveda to treat conditions like insomnia, stress, inflammatory bowel disease, anxiety, sexual dysfunction, and muscle pains. Between 2000 and 1400 BCE, the Hindu Vedas, specifically the Atharvaveda, make the first mention of cannabis.

Hemp, revered as a sacred plant in various cultures, holds a special place among the five most revered plants on Earth, as described in the Atharva Veda. According to ancient wisdom, within each of its leaves resides a guardian angel. The Atharva Veda further celebrates hemp as a profound source of joy, a giver of joy, and a liberator. In the Sanskrit language, hemp is referred to as "Bhang" or "Vijaya," representing its significance in spiritual and cultural contexts. Notably, Ayurvedic practices have documented techniques for extracting and purifying cannabis concoctions, showcasing its integration into ancient healing traditions. Beyond the realms of Indian Ayurveda, hemp has also been utilized in traditional Chinese medicine, exemplifying its widespread use in diverse therapeutic systems.

Hemp has been demonstrated to have anti-cancer properties at molecular level, reducing each of the cancer's telltale signs:
