UV PROTECTION

Excessively large embroidery may jeopardise the classification of the hi-visibility safety garment. Embroidery on wet weather jackets may also impair the waterproofing properties of the garment. Please seek professional advice.

1906.4:2010

This standard explains the use of hi-visibility fabrics and retroreflective materials. It specifies the chromaticity levels to which fabrics need to be dyed in terms of performance and atmospheric pressures in order to comply to the standard.

Natural fibre garments have a lower chromaticity level due to the nature of the fabric.

Class F	Daytime fluorescent
Class R	Retroreflective material
Class RF	Retroreflective and fluorescent
Class NF	High daytime visibility NON Fluorescent

4502.1:2011

This standard refers to how a garment is constructed using fabrics compliant to 1906.4 above. There should be no less than 0.2m² of unbroken hi visibility fabric on both the front and back of any garment that covers the upper torso. High visibility fabric must not be broken with non compliant fabric within the 0.2m² area from the top of the shoulders to the waist, so no full side panels at armpit level are permitted.

This standard also explains the position of the retroreflective tapes on the garment, the width and quantity used. These tapes should not detract from the 0.2m² measurement required.

Class D	Daytime use
Class N	Night time use using retroreflective material
Class D/N	Day/night use

4399

This standard refers to the capability of a fabric to protect skin against solar ultra violet radiation (known as UPF = ultra violet protection factor).

This standard is an additional bonus to the garment rather than an essential requirement for hi-visibility standards but often specified from specific industry users.

To most people, a safety garment is a safety garment. Orange or yellow, big or small, it's all the same. Not all hi vis safety garments sold in the market today comply to the latest Australian and New Zealand safety regulation for high-visibility garments 4602.1.2011.

Below are a few common examples of garments that would not pass the current 4062.1 2011 AU/NZ standard.

INCORRECT FLUORO AREA

Area of fluoro material should be no less than 0.2m² for front and back torso.

BROKEN TAPE

Retroreflective tape must not be broken or have gaps.

NON-FLUORO FABRICS

Dyed fabrics must meet chromaticity levels to comply with standards.

SYZMIK WORKWEAR COMPLIANCE

SHOULDER CONFIGURATION

- Compliant area of high visibility material.
- Compliant levels of fluoro chromaticity.
- Unbroken retroreflective tape in belt and brace configuration.

HOOPED CONFIGURATION

- Compliant area of high visibility material.
- Compliant levels of fluoro chromaticity.
- Unbroken retroreflective tape in hooped configuration.

BIO MOTION CONFIGURATION

- Compliant area of high visibility material.
- Compliant levels of fluoro chromaticity.

X BACK AND BIO MOTION CONFIGURATION

- Compliant area of high visibility material.
- Compliant levels of fluoro chromaticity.
- X Back and Bio Motion taping for improved recognition of when a worker has their back turned from a distance.

DON'T RISK IT! MAKE SURE ALL OF YOUR GARMENTS ARE FULLY COMPLIANT TO THE AUSTRALIA/NEW ZEALAND SAFETY STANDARD.

RUGGED COOLING

INTRODUCING RUGGED COOLING - SYZMIK'S HEAT STRESS MANAGEMENT RANGE THAT INCREASES BREATHABILITY BY OVER 110% WHILE ALSO INCREASING TEAR STRENGTH BY MORE THAN 70%.

LOOK OUT FOR STYLES WITH THIS LOGO

Heat Stress is the single biggest problem affecting our customers at work. Heat stress is not only uncomfortable but can result in serious injury or even death in extreme cases. Under the workplace health and safety act 2011 (AS) it is the legal obligation of employers to put plans in place to mitigate the heat stress risk.

Syzmik's Rugged Cooling range of works shirts and pants changes the way cool workwear is developed.

When we started to look for a better solution to heat stress we first had to understand the way the body cools itself which is primarily through the evaporation of sweat. So to aid the body in cooling, we set out to create a fabric that would increase breathability to not only keep the wearer cooler but also allow the body's sweat to evaporate and dry quicker.

The fabric we use is a 100% cotton, produced in a square weave construction that allows the maximum amount of air to pass through the fabric. Added features like extensive mesh venting and vented tape increases the breathability of our range even further.

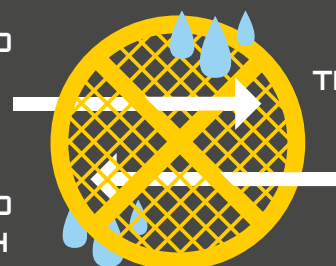

We then set out to make our fabric more durable and developed a ripstop construction in the fabric which uses thick reinforcing thread through out to make the fabric stronger while not limiting the breathability.

The result of all this development is a range that is not only cooler and more comfortable but also actually stronger than traditional workwear.

UNIQUE SQUARE WEAVE FABRIC AND VENTING ALLOW INCREASED AIR FLOW TO COOL YOU DOWN WHILE THE RIP STOP CONSTRUCTION GIVES THE LIGHT WEIGHT FABRIC MORE TEAR STRENGTH.

FIRE ARMOUR®

SYZMIK'S FIRE ARMOUR® RANGE HAS BEEN CREATED TO OFFER THE HIGHEST LEVEL OF PERFORMANCE POSSIBLE.

AS WELL AS DELIVERING ON UNCOMPROMISING PROTECTION, SYZMIK FIRE ARMOUR® FABRICS SOLVE THE ISSUE OF HEAT STRESS AND COMFORT.

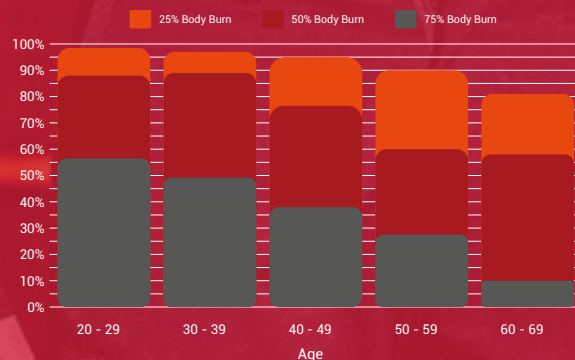

FR clothing is needed to protect workers who may be exposed to the risk of fire or arc flash. If non FR clothing, such as cotton is worn when exposed to these risks it will increase the injuries suffered from the incident. Non FR clothing will continue to burn after the source of the flame has been removed at an increasing rate, until all flammable material is consumed.

The flame from the continued burning of cotton or other non FR clothing will often cause more intense burns than the original incident itself. Burning clothing will also cause injuries to areas of the body that had not been exposed to the original incident.

FR clothing's key characteristic is that it will self-extinguish when the source of the flame is removed. Good FR clothing should also resist ignition, not melt, drip or break open when exposed to fire or arc flash. These characteristics greatly improve the survival rates and outcomes of anyone exposed to arc flash or flash fire.

FR clothing will not prevent all injuries in the case of a flash fire or arc flash incident but they will significantly reduce the injuries and give the wearer an ability to escape the incident.

The **Burn Survival Rates** graph below illustrates the importance of minimising the severity of burns:

SUPERIOR COMFORT, INDUSTRIAL TOUGH

METATech® fabric solves the problem of heat stress by providing inherent certified HRC/PPE 1 – 6 Cal Arc flash protection and ISO 14116:2008 and ISO 11612:2008 flame protection at an unbelievably light 155 gsm weight. Even though the METATech® fabric is lightweight it maintains great strength properties thanks to the use of para-aramid fibres throughout the blend. These fibres have also been used in products like Kevlar® because of its incredible strength to weight ratio.

ONLY FR RATED COMPONENTS USED

All products use fully FR rated trims including reflective tape, snaps, buttons, zippers and FR heat seal logos.

DESIGNED TO MINIMISE EXPOSURE

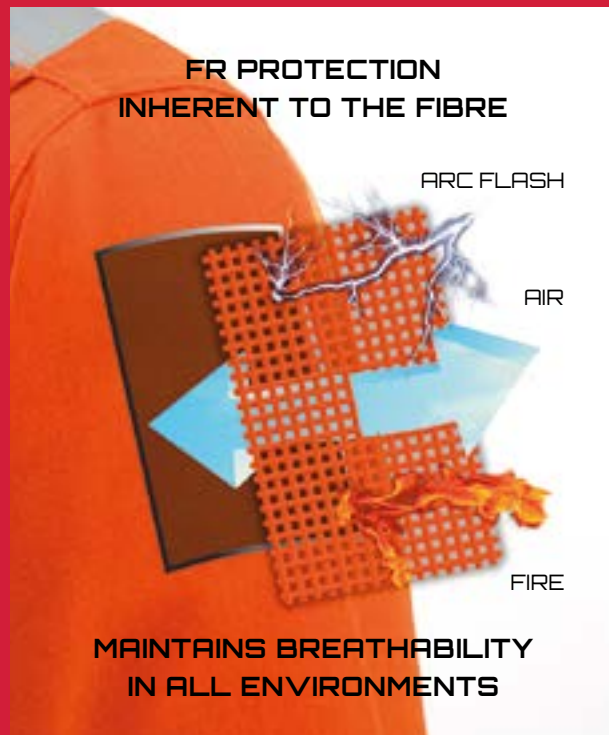

All products feature gusset sleeves that make it difficult for employees to roll up and wear incorrectly.

GARMENTS CAN BE REMOVED QUICKLY

Garments have been designed to be quickly removed in case of emergency, with FR press studs on the shirts and an FR zipper on the overalls.

INHERENT PROTECTION

METATech® fabric is an inherent FR fabric and will never wear or wash out, giving you peace of mind that as long as you are wearing it you are protected by METATech® unlike some other treated FR options.

SUPERIOR COMFORT, INDUSTRIAL TOUGH

At Syzmik we understand that an FR garment has to be cool and comfortable enough to wear or workers will simply not wear it. To combat this we developed a fabric that provides outstanding moisture wicking characteristics in a light 250 gsm fabric that delivers high level HRC/PPE 2 – 10 Cal arc flash protection as well as ISO 14116:2008 and ISO 11612:2008 certified flame protection.

ONLY FR RATED COMPONENTS USED

All products use fully FR rated trims including reflective tape, snaps, buttons, zippers. Non FR rated closures can melt when exposed to flames, this makes the garment difficult to remove and puts the wearer at risk of greater injury.

DESIGNED TO MINIMISE EXPOSURE

The range has been designed to achieve minimal skin exposure so all products feature gusset sleeves.

GARMENTS CAN BE REMOVED QUICKLY

Garments have been designed to be quickly removed in case of emergency, with FR press studs on the shirts and an FR zipper on the overalls.
