Verification ensures that the product is built in compliance with requirements,
specifcatiile and standards specified. Validation ensures that the product will be used on
market.
Implementation of a software product is teamwork of a number
large software developers often in different locations (eg different countries).
Thus it is necessary to use methods of implementation of the software. One
the software deployment method is a systematic approach
structured to effectively integrate basic software service or a component
structure of the whole product.
Quality software is given by certain characteristics that were
above. For a product to be considered as necessary
compliance with certain rules of implementation.

What we offer

Data security, its user-friendliness and our fast severs are the reasons why we're one of the supreme file hosters.
Millions of customers use @ daily in order to make their files available to friends or to store large files.

Who we are

We are a young enterprise with a team that is motivated, ambitious and extremely enthusiastic.
Each and every day we strive harder to work towards making our operation ever more efficient. We determined to out do any and
all competition by making the storage and transfer of huge data volumes faster, simpler and more secure for our users and customers, wherever they are.
Our site is among the most visited websites worldwide. An estimated 100,000 files a day are uploaded onto our servers.
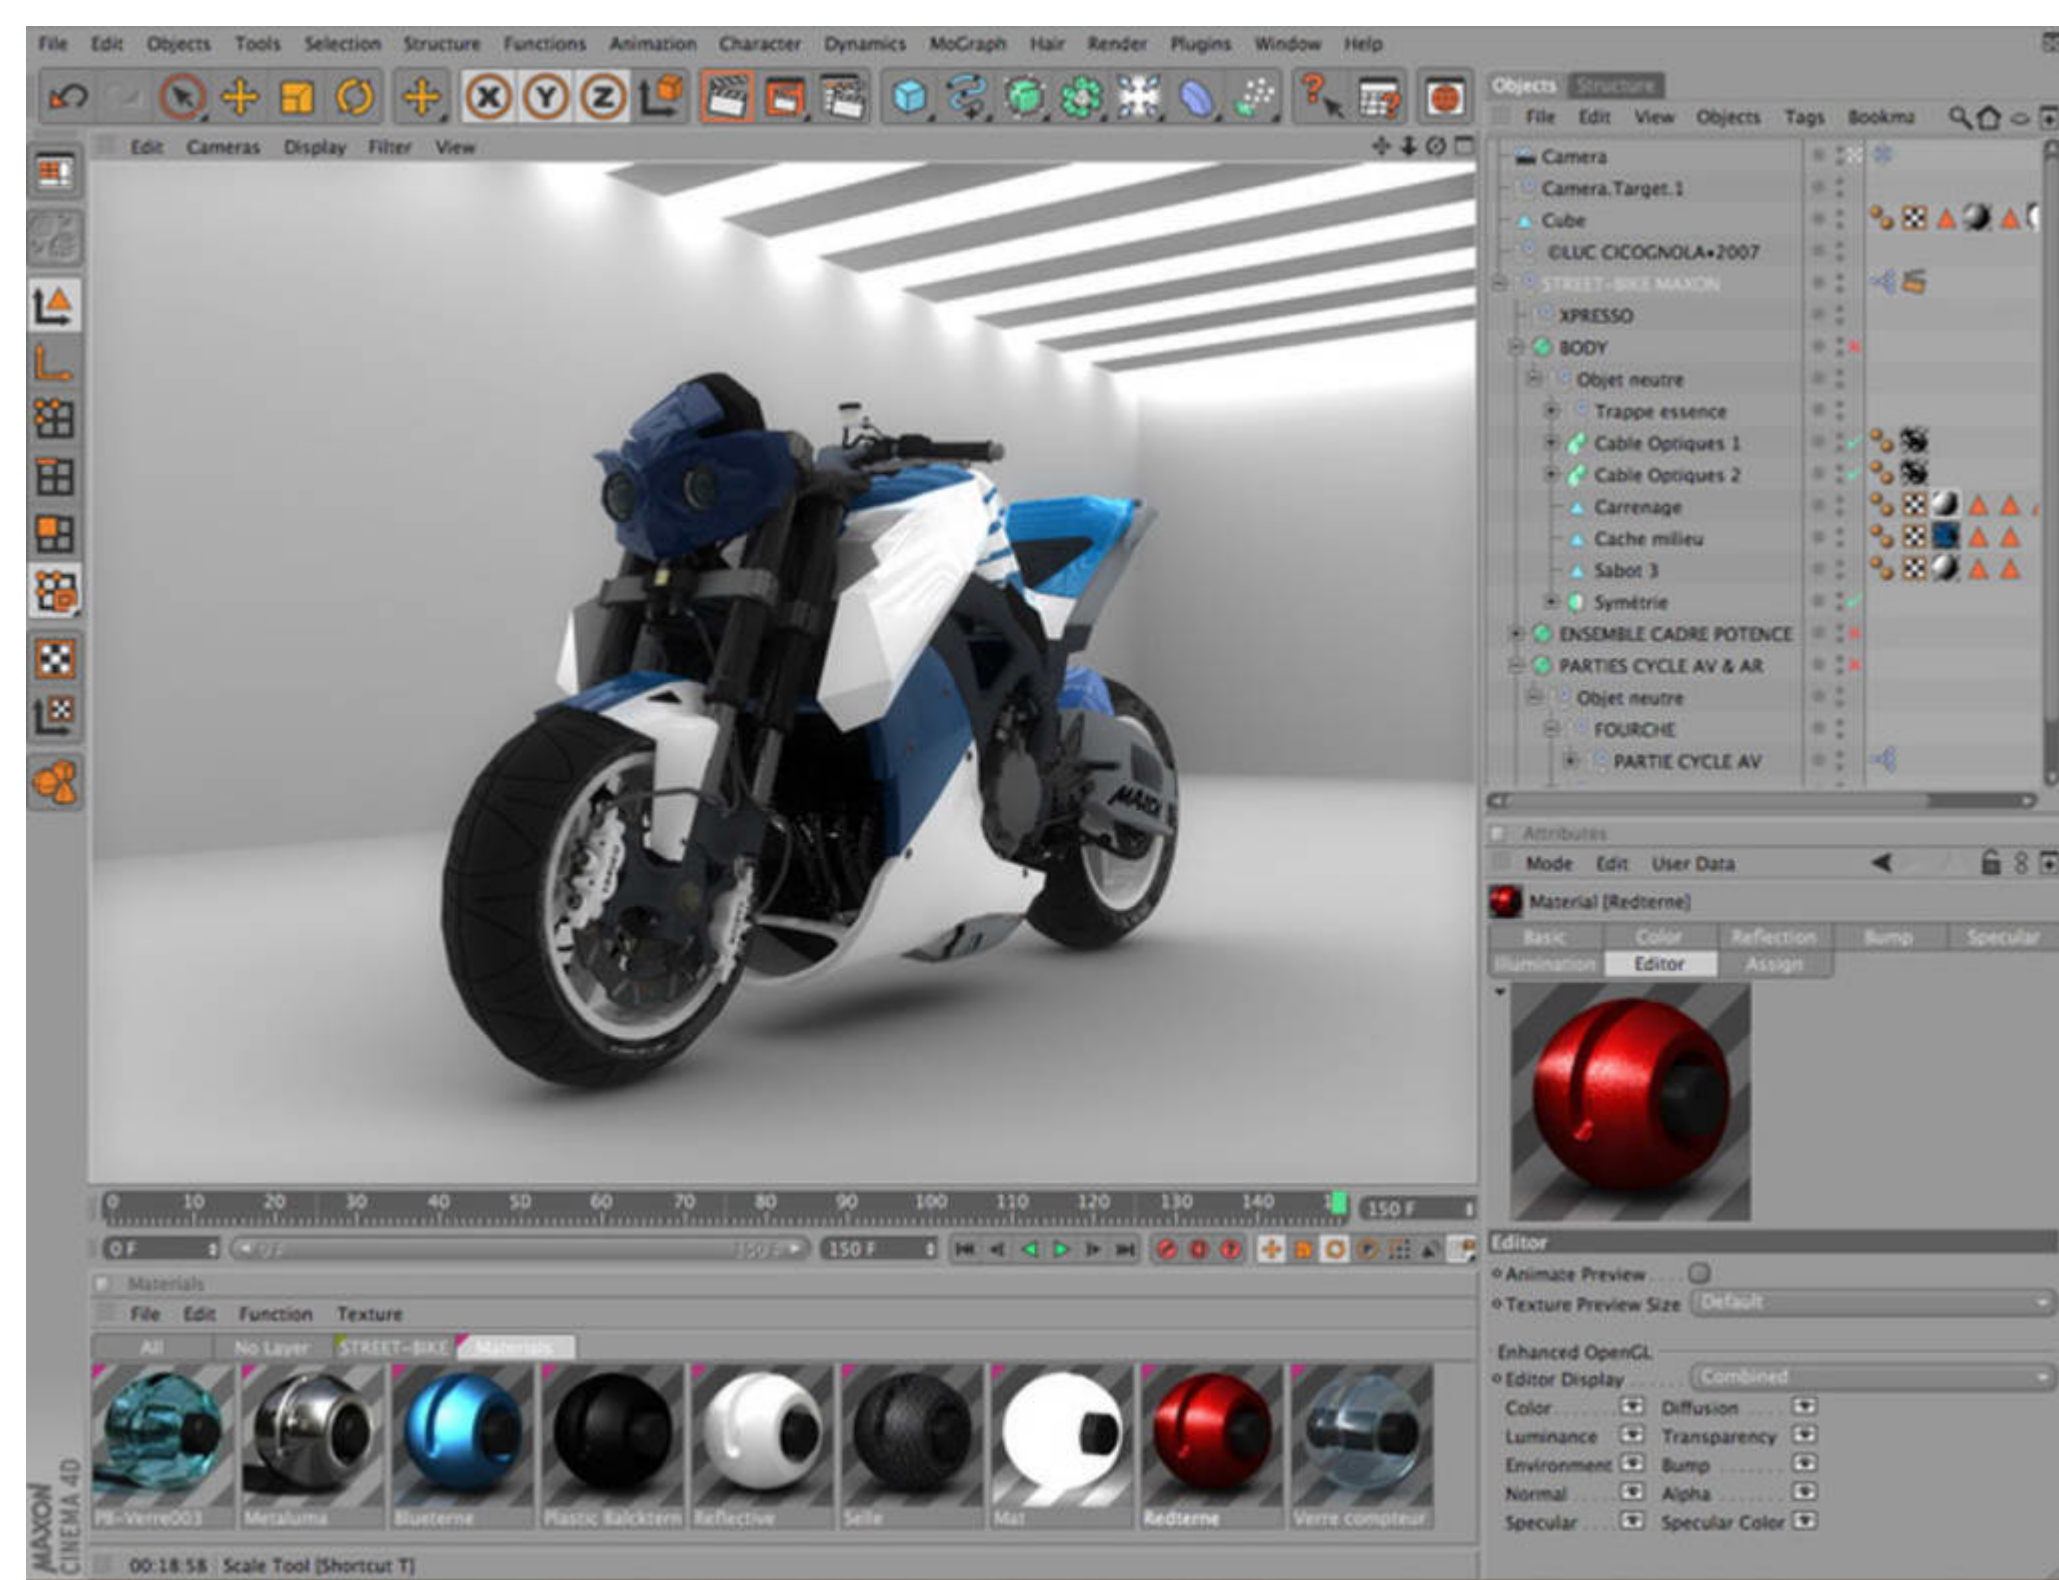

Over the past 3 years we did not promote our site, almost completely refused advertising and were focusing on support of the existing users.
We are pleased to note that most of the old members remained loyal to us and continued to use our service to store and share their files with friends and colleagues.

All this time we made many efforts for ensuring safe existence of our site, first of all in regard to pro-active verification of the uploaded files.
Our filters caught the majority of attempts of uploading and distribution of undesirable content.
And our support reacted to any addresses from the file owners in the 24/7 mode.

But at the same time risks and pressure put upon the market of file hosting services grew.
Over the last 3 years many file hosting services have been forced to close due to insufficient measures taken to control the upload of the files,
and / or if the inquiries of the file owners were insufficiently quickly processed. At the same time we received the influx of customers who have
tried to move to us their questionable files for distribution. And we were forced to fight them with great effort.

Today we are compelled to recognize that within the current model of our site and the current situation it is difficult for us to exclude completely
the possibility of uploading and distribution of illegal content through our site. Our small support team can't cope with it. In this regard, and also
in connection with the increased pressure from the payment systems, we made a tough decision to freeze even more this project, having stopped accepting
of new payments.

However, we are committed to fulfill all obligations to existing users and keep their personal files in complete safety and accessibility to the expiration of
their premium memberships. Please note that this situation won't affect free accounts in any way.

Also we would like to note that our support team is ready to assist you with any questions as before.

Having taken this break we will try to find resources for evolution of our service in a new, conforming to the modern requirements project for storage of personal files. Though we realize that it is not a simple task, and to us is difficult to make any promises on terms.

We thank all the customers who have chosen our service and regret that it's not possible for us to continue our work as before.
