

DERMASTIR Post-Op Hyaluronic Eye & Lip Contour

Dermastir Hyaluronic Eye & Lip Contour mask is a medical device used post-op by dermatologists and plastic surgeons. This unique decongesting formula produces a protective barrier and collagen production is stimulated. This hydrating mask brightens up dark circles and the absorption of ingredients is 50 times the common eye membrane.

The formula inhibits enzymes that break down hyaluronic, collagen and elastin which is the underlying cause of wrinkling. Take care of the skin in post-op phase is essential since it lets a practitioner close properly the work and soothe the skin after invasive or non-invasive treatment.

Dermastir Post-Op Hyaluronic Eye & Lip Contour

Dermastir Hyaluronic Eye & Lip Contour Post-op mask has been created to strengthen the skin barrier of the delicate and fragile eye contour area and, at the same time, to stimulate the collagen synthesis.

Dermastir Hyaluronic Eye & Lip Contour Post-op mask has a strong decongesting action and forms a protective layer around the eye contour, which is important after aesthetic procedures.

Dermastir Hyaluronic Eye & Lip Contour Post-op mask helps to treat dark circles and reduce the length and the depth of the wrinkles. The mask can be used as home treatment or by a medical professional after a treatment to soothe the skin and enhance regenerative processes.

DIRECTIONS FOR USE

Apply once or twice a week or post-op for 15-20 minutes.

1. Cleanse your face to remove any make-up, dirt or oils. Rinse well and pat dry with a towel.
2. Remove the outer layer of the hyaluronic eye mask.
3. Place the mask around the eye contour; pat and stretch gently to ensure it adheres to the skin.
4. After 15-20 minutes, remove the mask.
5. Proceed with the normal skin care routine without washing off the serum.

LIP CONTOUR

Hyaluronic Acid

The hydration provided with the HA is extremely important, since the lack of moisture in the skin may lead to its drying out and cause premature signs of ageing.

Palmitoyl Pentapeptide-4

Known also as collagen pentapeptide for its structure-giving properties with the visual impact on fine lines and wrinkles. It launches retexturizing skin processes, evens skin tone and decreases bruising post-op.
