Dermastir Luxury Ampoules Elastin

Dermastir Ampoules Elastin will help to compensate the loss of elastic matter in the derma and improve the elasticity and firmness of the skin. Elastin is a protein in connective tissue that is responsible for giving structure to the skin, by allowing it to resume shape after stretching or contracting. With ageing, the elastic fibers progressively degenerate and separate into fragments. The skin progressively loses its elasticity and wrinkles start appearing. For this reason, it is extremely important to apply Dermastir Ampoules Elastin to help increase the amount of elastin content, making skin appear toned and hydrated.

Elastin

Elastin is a protein responsible for our skin's essential elasticity and tonicity. Together, collagen and elastin keep connective tissue firm and help it to hold its shape. It can be said that "we are as old as our elastic fibers". With age, the natural production of elastin slows down and causes sagging, line and folds.
