

DERMASTIR Post-Op Bio-Cellular Retexturizing Face Mask

Dermastir Post-Op Bio-Cellular Retexturizing Face Mask is made from the fermentation of microorganisms, not from mechanical manufacturing process. Alta Care Laboratoires utilizes biotechnology to manufacture the skin tissue-like material. The unique formula produces a protective barrier and collagen production is stimulated. The mask is hydrophilic and it diminishes the TEWL since it can retain moisture levels up to 100 times its own dry weight. The formula was created to inhibit enzymes that break down hyaluronic, collagen and elastin in the skin. Its reticular 3D web structure enables air to penetrate but not liquid, it adheres tightly with the skin and is also known as 'second skin tissue'.

Dermastir Post-Op Bio-Cellular Retexturizing Face Mask

For a very long time, the skin treatment in post-op phase has been neglected which had an impact on the immediate final result of the treatment and in long term perspective. Dermastir Post-Op Bio-Cellular Face Mask is unique in its genre and different from other products on the market. It is the most occlusive which means that the mask wakes up skin cells, improves their response to treatment and closes properly the work of a practitioner in post-op phase. Moreover, an elevated hydrophilic capacity, longer time for release of active ingredients and a perfect adherence of the mask guarantee the excellent penetration of the ingredients into the skin and visible results. Unlike cotton sheet masks, Dermastir Post-Op Bio-Cellular Retexturizing Face Mask does not dry out and adheres perfectly that means the patient does not have to lie down in order to keep the mask from falling off.

DIRECTIONS FOR USE

Apply once or twice a week or post-op for 30-45 minutes.

1. Cleanse your face to remove any make-up, dirt or oils. Rinse well and pat dry with a towel.
2. Remove the outer layers of the bio-cellular mask's packaging to reveal the elastic and translucent bio-cellular mask inside.
3. Place the bio-cellular mask on the face. Pat it gently to ensure it adheres to the skin.
4. After 30-45 minutes, remove the mask. Massage the rest of the serum on the skin. Massage the rest of the serum on the skin.
5. Proceed with the normal skin care routine without washing off the serum.

Palmitoyl Pentapeptide-4

Known also as collagen pentapeptide for its structure-giving properties with the visual impact on fine lines and wrinkles. It launches retexturizing skin processes, evens skin tone and decreases bruising post-op.

Hyaluronic Acid

The hydration provided with the HA is extremely important, since the lack of moisture in the skin may lead to its drying out and cause premature signs of ageing.

Dipotassium Glycyrrhizate

It has sebum regulating properties, smoothing and calming action, useful in treating symptoms of various skin disorders and conditions.

Tocopherol (Vitamin E)

Radical scavenger. Known for its strong antioxidant properties.
