## Dermastir Post-Filler Scar Repair 4x4ml

Alta Care Laboratoires has developed a unique product Dermastir Post-Filler with a special technology based on tiny particles for scar repair.

A combination of soluble collagen and antiseptic ingredients penetrate the skin without the need of any needle. The soluble collagen particles are visible to the naked eye but they still penetrate deep into the skin. The collagen particles found in Dermastir Post-Filler, presented in a solid form, dissolve easily into the skin due to their tiny size.

The product can be used on all types of scars such as acne scars, keloid scars, operational scars, wounds and burns and can be used immediately when the healing process begins.
