

DERMASTIR®

Dermastir Post-Filler Vitamin C

Quantity: 4x4ml

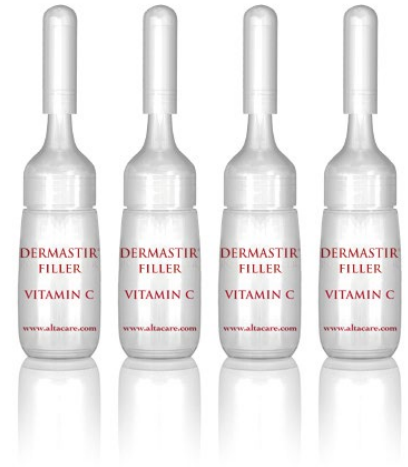

Vitamin C is one of the most well-known powerful antioxidants and a key element in the production of collagen in high concentrations. Vitamin C accelerates the skin's cell turnover mechanism, preventing dark spots and dull skin tone as a result. Since Vitamin C is unstable to deliver in the epidermis in the optimum dosage the research by Alta Care Laboratoires produced and developed Dermastir Post-Filler Vitamin C, where the vitamin is presented in a stable solid particle form at a high dosage.

When Vitamin C is presented in stable solid form its activity is superior to Vitamin C presented in liquid form at high dosage. Special tiny-particle form of Dermastir Post-Filler guarantees its delivery into the skin and maximum performance and efficiency.

DERMASTIR®

Dermastir Post-Filler Vitamin C
Quantity: 4x4ml

Dermastir Post-Filler contains a unique high dosage of Vitamin C in solid form with superior activity and performance compared to Vitamin C in liquid form.

Vitamin C in Dermastir Post-Filler is presented in tiny particles that visibly penetrate into the skin. The level of penetration is deeper and more intense compared to other Vitamin C products on the market.

Vitamin C in Dermastir Post Filler is stable and can be dosed on the respective areas of the face that need more protection.

Dermastir Post Filler Vitamin C is excellent to mix with sun protection creams that have very low levels of antioxidants.

Use one ampoule per week to see visible results.

1. Cleanse your face to remove any make-up, dirt or oils. Rinse well and pat dry with a towel.

2. Push the cap down to break the seal of the Dermastir Post-Filler ampoule before taking off the cap.

3. Mix the vitamin C particles with a cream and apply the mix on the parts of the face prone to pigmentation such as the upper lip and the cheek bones.

4. Vitamin C post op filler can also be applied directly on the pigmented prone areas of the face.
