

# DERMASTIR®

**Dermastir Twister Coenzyme Q10**  
**Lipophilic Monodose Serums**

Dermastir Twisters Coenzyme Q10 are presented in monodose shiny pink softgels. Dermastir Twisters Coenzyme Q10 supply with oxygen the skin cells, boosting the natural defence against skin ageing.

Good oxygen supply is necessary for the skin, sometimes even more than hydration. It happens that gels and creams are not used properly, since it is thought that the hydration would be enough in cases when the skin needs oxygen to be healthy and radiant. For this reason, the Coenzyme Q10 in high concentrations improves the release of oxygen on cellular level and contributes to overall anti-ageing.

## Ubiquinone ( Coenzyme Q10 )

Improves oxygenation of cells, boosts skin repair and regeneration, reduces the risk of damage caused by free radicals. It has been also shown that CoQ10 reduces the effects of photoaging. It helps to maintain and rejuvenate the skin complexion, making it more smooth and bright.

## White Tea ( Camellia Sinensis )

Contains flavonoids with anti-oxidant properties, gives the skin smooth and bright complexion.

ANTI WRINKLE

TEWL REDUCTION

ANTIOXIDANT

OXIDATIVE STRESS

CELLULAR TURNOVER

PROTECTIVE BARRIER

Dermastir Twisters have high concentration of active principles. For this reason, Alta Care Laboratoires implements airtight technology to protect the ingredients from oxidation, moisture and contamination. Therefore, it is recommended to keep the Twisters protected inside their packaging.

## Dermastir Twister Coenzyme Q10 Lipophilic Monodose Serums

Dermastir Serum Twister – Coenzyme Q10 by Alta Care Laboratoires presented in monodose capsules is a lipophilic serum. The mechanism of action of lipophilic serum is different from a hydrophilic known for its ability to dissolve in the water of the skin. The lipophilic serum dissolves in the fat and sebum of the skin and forms a protective barrier on the skin surface.

Dermastir Serum Twister – Coenzyme Q10 can be applied after a hydrophilic serum, allowing in this way to a hydrophilic serum applied before to remain for a longer time in the skin and to remain more active.

This effect is due to the fact that the skin level where a lipophilic serum performs its action is above the level where the hydrophilic serum is dissolved.

Thus, the lipophilic serum thanks to its structure retains and “blocks” the ingredients of a hydrophilic serum inside the skin for a longer period.

ANTI-AGE  
SKIN BRIGHTENING
