

DERMASTIR®

Dermastir Twister Retinol Lipophilic Monodose Serums

Dermastir Twisters Retinol is a unique formula by Alta Care Laboratoires since Retinol is presented in lipophilic serum form, unlike the pharmaceutical form that is hydrophilic.

This rich formulation contains Retinol (Vitamin A) and White Tea extracts that sooth the skin, making it supple and radiant and visibly reducing expression lines. Moreover, Retinol is excellent in case of hyperpigmentation. The Dermastir Twisters Retinol in lipophilic form can be used at home as cosmetic or even in combination with pharmaceutical formulations of Retinol. This Retinol combination is used worldwide by dermatologists due to guaranteed excellent results.

Retinyl Palmitate (Vitamin A)
Reduces roughness, wrinkles and pigmentation, helps to speed cell turnover, stimulates collagen synthesis and increases skin moisture levels and elasticity. Esters of Vitamin A, such as Retinyl Palmitate, are considered helpful in the prevention of photoaging.

White Tea (Camellia Sinensis)
Contains flavonoids with anti-oxidant properties, gives the skin smooth and bright complexion.

Dermastir Twisters have high concentration of active principles. For this reason, Alta Care Laboratoires implements airtight technology to protect the ingredients from oxidation, moisture and contamination. Therefore, it is recommended to keep the Twisters protected inside their packaging.

Dermastir Twister Retinol Lipophilic Monodose Serums

Dermastir Serum Twister – Retinol by Alta Care Laboratoires presented in the monodose capsule is a lipophilic serum.

The mechanism of action of lipophilic serum is different from a hydrophilic one widely presented on the market and known for its ability to dissolve in the water of the skin. The lipophilic serum dissolves in the fat and sebum of the skin and forms a protective barrier on the skin surface.

Dermastir Serum Twister – Retinol can be applied after a hydrophilic serum, allowing in this way to a hydrophilic serum applied before to remain for a longer time in the skin and to remain more active.

This effect is due to the fact that the skin level where a lipophilic serum performs its action is above the level where the hydrophilic serum is dissolved. Thus, the lipophilic serum thanks to its structure retains and “blocks” the ingredients of a hydrophilic serum inside the skin for a longer period.
