Installation Options:

Replacement Wind Vane for Vantage Pro2 Systems

If you need to replace the wind vane on your Vantage Pro2 anemometer, you will need to know which vane to order: 7904 (for anemometers with a round vane shaft) or 7906L (for anemometers with a D-shaped vane shaft).

There are two ways to tell which vane you need: you can use the manufacturing code on the back of the console or you can look at the shape of the vane shaft on the anemometer.

Look at the manufacturing code on the console:

Use Wind Vane 7904 if:

- The manufacturing code on the label on the back of your console's kickstand starts with a SINGLE letter, (such as A1324567...),
- OR any of these:
  - AA
  - AB
  - AC
  - AD
  - AE
  - AG
  - AH

Use Wind Vane 7906L if:

- The manufacturing code on the label on the back of your console's kickstand starts with TWO letters (such as AJ1234567...), from
- AJ forward
  - (AJ, AK, AL and so on) OR
- AF

OR

Remove the vane and look at the vane shaft on the anemometer head:

Use Wind Vane 7904 if:

- The vane shaft is **round** in cross section:
  - Right
  - Wrong

Use Wind Vane 7906L if:

- The vane shaft is **D-shaped** in cross section:
  - Right
  - Wrong
