

WELD BACKING TAPE

Light gauge fibre glass cloth backing, 25mm wide for 50mm tape.

Medium gauge fibre glass cloth backing, 40mm wide for 100mm tape.

This range of Weld backing tape is a simple and cost effective alternative to using a back purging gas. Simply apply a strip of self adhesive tape to the back of the weld to reduce weld oxidation and provide support to the back of the weld.

Suitable for use on large diameter pipes, vessels or flat plate where cosmetic appearance and/or weld integrity is deemed important.

Constructed from high temperature aluminium tape and fibre glass cloth.

Available in 50mm (100Amp) or 100mm (200Amp) widths in roll lengths of 12.5 metre.

Benefits include:-

- Smoother flatter welds
- Reduced post weld dressing/cleaning
- One sided welding
- Reduces or eliminates the need for back purging
- Easy to use and quick to apply
- Increased production
- Halogen free tape

Manufactured in the UK.

Available in 50mm or 100mm widths on 12.5m rolls
