

# PROFESSIONAL PURGING EQUIPMENT

WELD SEAMS WITHOUT TEMPERATURE DISCOLORATION

# PROFESSIONAL GAS PURGE SYSTEMS FOR STANDARD AND SPECIAL WELDING FABRICATIONS

Walter Schnorrer ApS Welding Equipment is a Danish company founded in 1987, and is a patentee and manufacturer of a wide range of gas purge equipment for use when welding special metals and alloys, in particular stainless steels, titanium, duplex, and super duplex. When welding these special materials it is essential that the welding process takes place in an inert atmosphere in order to prevent oxidation, and this inert atmosphere is often best achieved in a welding chamber. Depending on the metal or exotic alloy to be welded, the

residual oxygen in the welding chamber may need to be reduced to less than 50 ppm to obtain a corrosion-resistant result. Oxidation develops through contact with oxygen when the material is

heated to welding temperature. After welding has ended it is important to maintain the inert atmosphere until the temperature of the work-piece is below 250°C, depending on the material. These Schnorrer advanced gas purge systems are under continuous development to meet many demanding technical specifications and functional needs, and to meet these needs economically.

## WHY CHOSE A WALTER SCHNORRER® GAS PURGE SYSTEM?

There are many situations in the welding of stainless steels or other special metals where introducing Schnorrer gas purge equipment to the welding procedure can improve weld quality and provide very valuable cost reductions and savings in job time and argon gas consumption.

There are often several methods by which to try and achieve a purged welding environment, and one essential feature of any method is that it always produces the critical low level of oxygen specified for the material. The purge tool used must be robust and must purge efficiently every time, regardless of variables, e.g. the welding position or the presence of pipe elbows and bends.

The figures below compare the costs of using a Walter Schnorrer® purge tool and foam plugs when welding pipes. The nett prices used are 200 Danish kr. per hour and an argon gas price of 30 Danish kr./ m³.

The Walter Schnorrer® gas purge systems are designed so that a gas flow rate in litres/minute of 10% of the pipe diameter (mm), produces a purge time of only 1½-2½ minutes. It is expected that when welding 20" pipe, the cost of the purge tool will be recovered over 15-20 butt welds. When using foam plugs the purge time is different for each pipe dimension.

There are many requirements of a purge tool if it is to be a truly efficient and economical method of eliminating oxygen from the welding environment.

#### Requirements of a purge tool:

- Short and defined purge time to extremely low oxygen level
- · Consistent gas flow
- Quick and easy to assemble and dismantle
- · Minimum of parts
- Minimum use of tools
- $\bullet$  Time and argon gas savings
- Able to withstand high temperatures
- UV-resistant
- · Several methods of fixing
- Flexible in use (any pipepart and pipe fitting)
- Efficient and fast gas diffuser

- Useable in all welding positions
- Ability to pull or shoot (with compressed air) the tool through pipe lengths
- Suitable for all welding processes (MIG/ MAG, TIG and Plasma welding)
- · Robust and with long life

In this catalogue we present our wide range of standard and proven products for the purge of weld assemblies. In addition to this standard product range, we produce tailor-made equipment for special applications.

#### **Patent Numbers:**

DK198389, US 4956537, US 5126526, US 5217156, CA 1322229, Aust 617189, HK1005926, EP 348125, 328131, EP 486420, 592055, 1005927.

## SC PROFI SINGLE

SC Profi Single models can be used for tubes in the smaller dimensions of ID 13 to 43 mm. An SC Profi Single consists of one double- or triple sealing lip and a sintered metal gas finger diffuser available in various lengths (12/25/50 mm). With an SC Profi Single it is possible to weld with an open tube end, when the seam is within 30 mm (or 1 x tube dimension) of the end of the tube.

## SC PROFI

The Schnorrer SC Profi range of purge tools is for use in tubes and pipes of internal diameters from 13 mm to 215 mm. The SC Profi is supplied as a complete unit, so there are no loose pieces to "disappear" or be lost. The SC Profi gas cylinder consists only of two triple-sealing lip elements, a gas inlet and a gas outlet, a connecting axis and a connection hose with a rectus nipple.

There are three different kinds of connecting axis; a solid connection is used for straight pipes, a flexible connection for elbows, and a spring connection for when the tool needs to go through several elbows, one after the other. As standard, the SC Profi models 17-45 mm are supplied with a spring connection for use in the relatively sharp elbows met in these pipe sizes, while all other SC Profi models are delivered with a flexible connection.

The gas inlet and outlet are provided with triple sealing lips that prevent them from tilting or falling over inside an elbow, and the design also guarantees that at least one lip will always remain tight to the pipe wall. The discs are UV- and temperatureresistant up to 340°C for up to one hour. The gas diffuser is made of sintered metal to ensure long life and is integrated into the inlet disc. This design of gas diffuser provides an even flow of gas and prevents any gas turbulence behind the weld, thereby minimising the risk of oxygen in the welding chamber while, at the same time, achieving an extremely short purge time. These extremely short purge times result in valuable cost savings in gas and time and the weld seams are without temperature discoloration.

- The SC Profi range is used in tubes and pipes of internal diameter from 13 mm-215 mm
- Substantial cost savings in gas and time
- Gas flow rates in litres/minute when purging are 10% of the internal diameter (mm) of the tube or pipe
- Patented triple-sealing lip elements that do not tilt or fall over inside an elbow
- Patented gas diffuser
- Extremely suitable for orbital welding, only 8 mm back pressure
- Temperature resistant to 340°C for up to one hour
- UV-resistant
- Suitable for TIG, MIG/MAG, and Plasma welding
- The tool is one complete unit
- Goes round elbows and bends
- Can be "shot" through a pipe by means of compressed air
- Fast positioning

### SC PROFI, COMPLETE

Supplied with 2 discs (340°C), flexible connection and 8 mm fix/release gas connection

Number	Туре	ID	Flow	Purge time

1700231	SC Profi Ø 231 mm with 250 mm flex connection	195-215 mm	23 L/Min	4,0 min

# SC PROFI FLANGE-CONE

SC Profi Flange-Cone is designed for the welding of flanges, couplings and short pipe lengths.

The tool consists of three parts: an aluminium cone, a gas connection pipe and the well known and proven SC Profi disc with an integrated sintered stainless steel gas diffuser and in a special design. The construction of the gas diffuser guarantees a laminar flow of gas without turbulence during purging and the welding process. Gas flow\* rates in litres/minute during purging are 10% of the internal diameter (mm) of the pipe, and typical purging times\* are less than 1,5 minutes.

A further advantage of the Flange-Cone is that it can be used as an alignment tool to hold the pipe sections together and centre them at the same time. SC Profi disc in the special design is available in the same dimensions as the SC Profi discs. For larger dimensions please ask.

- \* Or less depending of dimension and length of the connection.
- Complete unit
- Aligns pipe sections
- Quick fitting
- Short purge time

## **PURGE PLUGS**

The plugs are made of the same heat resistant (340°C) and strong silicon material as all our professional purge tools.

# PURGE TOOL KITS COMPLETE FOR 3/4" TO 6" PIPES

#### The tool kit includes:

SC Profi 24 mm to 176 mm, solid and flexible connections, gas hose complete with couplings, 10 metre insulated pull wire with stainless steel snap hook, 50 l/min gas flowmeter and aluminium tape.

23 parts delivered in a Toolbox Raaco.

PURGE TOOL KITS COMPLETE FOR FLANGE CONES/PIPES IN DIMENSIONS FROM 3/4" TO 6"

#### The tool kit includes:

SC Profi special inlets from 24 to 176 mm, SC Flange cones from 16 mm to 168 mm, nipples and connections, 8 metre gas hose complete with couplings and a 50 l/min gas flowmeter.

23 parts delivered in a Toolbox Raaco.

# RANGE OF PLUGS FOR 1/2" TIL 3" TUBES

### Comprising:

- 1 Plug 10-24 mm Type 1
- 1 Plug 15-30 mm Type 1
- 1 Plug 22-34 mm Type 3
- 1 Plug 31-48 mm Type 3
- 1 Plug 48-65 mm Type 3
- 1 Plug 65-81 mm Type 3
- 1 Gas finger 10x25 mm
- 1 SC gas hose PVC

## WS & WS PLUS GAS CYLINDERS

The WS and WS Plus Gas Cylinders are available for pipes from 145 mm to 1000 mm diameter. These tools have two heat-resistant sealing lips, with the WS Purge Gas Cylinder being heat-resistant to 280°C for up to one hour, and the WS Plus Gas Cylinder taking 340°C for up to one hour. The tools have extremely short purge times of only  $2\frac{1}{2}$  minutes for all dimensions, a feature that no other purge tools provide.

When welding thin-walled pipes with only few elbows, it is recommended to use the WS Gas Cylinder, fitted with a pull ball if necessary. The WS Plus Purge Gas Cylinder is suitable for critical applications in the offshore industry and, if mounted with an optional pull system, it goes through several bends without any problems.

WS and WS Plus Gas Cylinder

The difference between the WS and the WS Plus is in the design and heat-resistant material of the sealing lips. By changing the lips, e.g. the sealing lips on a 265 mm WS can be replaced with 12" lips, it is possible to weld three different pipe diameters with the same cylinder. The product difference is illustrated in the photograph, which shows the WS Plus with deeper sealing lips. This ensures that the tool is always tight to the pipe wall, including those applications where bends are encountered. Please see special section about additional equipment for elbows.

As shown, the two tools overlap each other. The choice of product depends on the particular welding application. Factors to consider are, the internal diameter, the number and geometry of the bends, the distance the tool is to be pulled, the wall thickness, any pre-heat, and etc. Only then can a decision be made.

Tailor-made sizes available.

#### WS and WS Plus Gas Cylinder

- Purge time 21/2 minutes
- Effective purge
- Fast and easy to position
- Complete unit

#### **WS Plus Gas Cylinder**

- Pipe from fra 8-40"
- Heat-resistant to 340°C (Max. 1 hour)
- Can be pulled through bends with help from a pull system

#### **WS Gas Cylinder**

- Pipe from 150-1000 mm
- Heat-resistant to 280°C (Max. 1 hour)
- Can be pulled through bends with help from a pull ball

# PULL EQUIPMENT FOR PURGE TOOLS

One of the main advantages of Schnorrer professional welding systems is that the tools can be pulled around pipe bends and elbows, and even through several elbows one after the other. There are different solutions depending on the dimensions and the type of pipe. A common feature

when using the purge tools is that the use of French chalk will minimize the frictional resistance.

Cable reel for gas hose and pull wire

# WS GAS CYLINDER

WS Gas Cylinder can be pulled through a bend with the help of a pull ball. The adjacent picture shows the correct way to fit the pull ball, that is, with the distance between the pull ball and the WS Gas cylinder being 1 X pipe diameter. The use of the WS Plus Cylinder is advised if it is known that the tool has to go through several elbows.

#### **Pull ball for WS & WS Plus**

Туре
Pull ball 150 (∅125)
Pull ball 160 (∅155)
Pull ball 200 (∅200)
Pull ball 250 (∅230)
Pull ball 300 (∅280)
Pull ball 400 (∅360)

# WS PLUS CYLINDER

WS Plus Cylinder can be pulled through several elbows without problems when fitted with a complete console. It is very important that the balls are fitted correctly, which is 3 mm away from the pipe wall. This makes it possible to pull the tool across welded seams. For very problematic bends the console can be used together with a pull ball, as described for the WS Cylinder.

#### **Complete console for WS Plus**

## SC PROFI

These tools are made with three sealing lip elements that ensure an effective gas purge even when pulling an SC Profi through pipe elbows. The standard purge tool is supplied with a flexible connection, but it can be advantageous to fit the tool

with a spring connection. The advantage of this spring connection is that it adapts exactly to the bore of the pipe, a feature that is particularly useful in tubes below 2½" bore, where you often meet relatively sharp elbows.

## WS OXY I

The WS Oxy I is a hand-held, batteryoperated oxygen analyzer. The measuring range varies from 1000 ppm to 10 ppm. The device has a maintenance-free zirconium cell with extended operating life. It is supplemented with an innovative display that represents operating state in color. This "traffic light system" provides the operator with a high level of comfort: since the operation state can be shown in colors visually, there is no need to read the exact values. The software and the operation method of the device are identical to the WS Oxy II. Furthermore, it has a loud integrated buzzer. The reports of the device (buzzer, colors, flashing of the readings, etc.) are very simple and user-programmable.

The device is offered in different versions. Standard device includes analyzer, transport box, a plug-in power supply unit, the manuals in German and English, as well as the calibration certificate.

In addition, a car charger cable can be acquired (cigarette lighter).

The Premium version has multiple outputs for documentation, PC connection, Bluetooth, 0-5 VDC analog and an RS 232-cable for a printer.

- Temperature regulated zirconium cell
- Graphic display screen changes color relative to process and function
- Built-in recognition for 110V-240V power
- Portable for remote and dificult acces sites using 7V 3200 mAh rechargeable batteries (4 Hour)
- Integrated programmable sound function
- Multilanguage: english, german, danish
- Low permeability measuring hose for accurate measurements
- Connects via RS 232 interface, Bluetooth, 0-5 VDC (Orbitec)
- Software updateable
- Cigarette lighter charger available
- Data logging of up to 250 entries (PC Documentable but without date & time)
- Delivered in a Transportbox

## WS PURGE UMBRELLA

- For nozzle pipes on tubes and vessels
- · Sintered metal diffuser
- Heat-resistant silicon 280°C

# WS PURGE SYSTEM FOR VESSELS ∅800 TO ∅3000 MM

TIG Gas Drag adjustable

Plasma Gas Drag 280 Amp, water-cooled

This assembly is designed for welding vessels fitted with an inspection chamber and in the stated range of sizes. The vessel must be placed on turning rolls, and the leas on the column are

and the legs on the column are adjustable so that the tool can be used for more than one size of vessel. The gas drag is held between the 11 o'clock and 1 o'clock positions by a balance weight when the vessel turns. The setting-up time is about 5-10 minutes, and the tool

can be dismantled and removed through inspection chambers of 350 mm  $\oslash$  or more. The vessel must be circular  $\pm$  30 mm and suitable for TIG-welding.

There is a special Schnorrer water-cooled gas-drag for plasma welding.

# WS PURGE PROFILE

This series of WS Purge tools has been developed for larger pipes, flat or angled sheet metals, vessels and other assemblies. The tool is taken into the unit under vacuum and, in this way, can be used for fixing and as a purge tool. The tool is made with three chambers; two for vacuum and

one for purge gas, and the gas diffuser is designed to prevent turbulence in the purge chamber. The discs are temperature-resistant to 180°C for up to 1 hour. The tool can be used both inside and outside of a vessel and can be fitted with one or two vacuum chambers, as required.

# WS ALUMINIUM PURGE PROFILE

WS Aluminium Purge Profile with two vacuum chambers is used when welding corners in square vessels, and can be supplied with one vacuum chamber and one sealing lip. Purge time 2-3 minutes.

## WS ALUMINIUM PURGE PROFILE

with two adjustable vacuum chambers is suitable for longitudinal seams on flat or angled sheet metals, or on inner or outer longitudinal components in vessels of ID above 300 mm, the WS Aluminium Purge Profile is adjustable for angles from 90-180° by exchanging the end sheet. The profile is made in lengths up to 6 metres. Purge time 2-3 minutes.

# WS FLEXIBLE PURGE GAS PROFILE

Flexible SS purge profile made of stainless steel and fitted by vacuum on an 800 mm vessel. Can be mounted individually inside or outside circular or oval vessels in sizes above 600 mm  $\emptyset$ .

Purge time 2-3 minutes.

## WS TACK WELD SEAM PROFILE GAS CHAMBER

The use of purge gas is often omitted when tack welding. This tool makes it quick and easy to use purge gas during tacking. The tool is secured by suction clamps (the number depending on the length) for about 2 minutes.

No purge time required. Can be delivered for 90° angle joints and for longitudinal seams.

## WS PLASMA

This tool is especially developed for the plasma welding and cutting processes. The plasma tools consist of two discs, a gas inlet and a gas outlet and a connection piece. When using the plasma welding process, the connection piece must be made of copper. This purge tool is also extremely suitable in situations where one uses preheat and for welding T-joints in tubes of more than 8" diameter.

The tool can be used for other welding

processes as well but the purge time is then longer than when using other standard Schnorrer tools. Suitable for use in bends, the tool can be delivered with an extra pull system, consisting of balls and a spring connection piece of optional type and length.

- Suitable for Plasma and other processes
- Temperature-resistant WS Plus discs
- 340°C for max 1 hour
- Can be pulled through bends
- Suitable for preheated pipes/tubes
- Extremely suitable for T-tubes >8"

# WS VARIO

The WS Vario is of similar design and dimensions as the WS Plasma, but is fitted with a large pipe-connection that reduces the size of the purge chamber. Suitable when welding T-tubes above 8" diameter. Despite the reduced purge chamber, there is a relatively long purge time.

- Temperature-resistant WS Plus discs
- Shorter purge time than WS Plasma
- Extremely suitable for T-tubes
- Suitable for preheated pipes/tubes

# WS GAS DRAG FOR TITANIUM

When welding special materials, e.g. titanium, outside of a welding chamber, there is a choice of two standard Schnorrer WS Gas drags, the WS Gas drag SS, and WS Alu Gas drag. Common to both WS Gas drags is the effective gas diffuser that prevents swirls and turbulence in the welding zone. One WS Gas drag is made of stainless steel with a sintered metal gas diffuser, and the advantage of this WS Gas drag SS is that most sizes take more than one dimension. The other standard

model, the WS Alu Gas drag is made of aluminium, and here the packing is very simple to change and economical to use. The Standard WS Gas drags are available from stock for pipes in all dimensions and for sheet materials.

Tailor-made WS Gas drags can be made for special applications, while watercooled WS Gas drags are available for plasma welding.

WS Gas drag

- Plasma Gas drag

# WS ARGON CHAMBER

The WS Argon Chamber is designed to produce excellent results when welding critical fabrications in titanium or other exotic materials and is widely used in the aerospace and nuclear industries. The WS Argon Chamber is usually of the standard circular design and delivered in ID1000 mm and ID1500 mm sizes, but square or rectangular models are available on request. Common to both models is the gas diffuser system, which ensures a laminar flow of gas without turbulence. The typical purge time for a WS Argon Chamber ID1000 mm is only 20 minutes at 100 l/min argon gas flow rate.

**Edition:** September 2013.

**Delivery Time:** Orders received by 2.30 p.m. and for stock items

will be despatched the same day.

**Prices:** DKK or Euro. Prices in the catalogue are exclusive

of postage, packing and VAT. We reserve the right to increase prices as a result of increases in the cost of labour, raw material, fluctuations in

the rates of exchange, etc.
