Finally permanently odourless
with the power of microbiology

The Bactador® microbiology makes the difference

Odours accompany us throughout the day and any can be unpleasant. Be it in the bathroom, in the kitchen, in the car or in the pet environment. Mishaps such as urine stains on the carpet or soiling on the sofa can happen quickly.

With Bactador®, the source of the odour is not only covered up, it removes the odour pore-deep and without leaving any residue. The Bactador® microbiology guarantees reliable, sustainable cleaning.

The original, highly effective Bactador® technology with probiotic microorganisms combats the cause of odour and neutralizes odours and stains pore-deep and in a natural way.

Bactador® – for intensive cleaning and optimal hygiene

Bactador Microbiology

- natural microbiology
- real odour removal
- no covering up

VS. Home remedies and chemical cleaners

- aggressive ingredients
- no lasting effect
- only mask odours

Bactador® Car Interior Cleaner and Odour Remover 500 ml

Art. 250180
PU 6

Ideal also for campers and trucks

Bactador® Cat Litter Odour Remover Spray

- Pore-deep odour removal in and around the cat litter box
- Reliable for odours such as urine, faeces, vomit and much more
- Recommended by veterinarians
- Permanent odour removal with natural enzymes, also suitable for „territorial odours“ from cats on furniture, doors or wallpaper

Bactador® Cat Litter Odour Remover 150 ml	
Art. 250173 PU 12	

Bactador® Cat Litter Odour Remover 500 ml	
Art. 250168 PU 6	

For daily use:
Remove faeces and urine from the litter box. Spray the cat litter all over with Bactador® and let dry.

When refilling:
Completely empty the litter box. Spray Bactador® generously into the litter box and the environment. Let dry for 10 min. Wipe off any excess. Fill in new cat litter.

If there is a strong, unpleasant odour in the environment of the litter box:
Spray Bactador® in the surroundings, especially in open areas. Let it take effect for about 5 min. Then wipe off.

Bactador® Hutch Odour Remover Spray

- Pore-deep odour removal in and around the hutch
- Reliable for odours such as urine, faeces and general pet odours
- Recommended by veterinarians

For daily use:
Remove excrement and urine from the small animal hutch. Spray the bedding all over with Bactador® and let dry.

When refilling:
Completely empty the litter box. Spray Bactador® generously into the litter box and the environment. Let dry for 10 min. Wipe off any excess. Fill in new bedding.

If there is a strong, unpleasant odour in the environment of the animal hutch:
Spray Bactador® in the surroundings, especially in open areas. Let it take effect for about 5 min. Then wipe off.

Canosept[®]

HOME PHARMACY

„Depending on the season,
our dogs face different challenges.
Canosept offers dog owners
the ideal home pharmacy.“

Prof. Dr. med. vet. Norbert Mencke
Veterinarian

Canosept®

Care and health for dogs

The Canosept® care range is the practical, easy to use home pharmacy for dogs. The high-quality products offer an excellent, reliable effect and have been specially developed by veterinarians for the needs of dogs. Used regularly, the cleansing and caring ingredients of the products provide a pleasant feeling and prevent possible diseases.

In the first German dog health barometer by Canosept® and the pet insurance company PANDA it is clear that preventive health care for dogs is becoming increasingly important for pet owners. More than half of the 570 respondents stated that the increase in the cost for veterinary visits they are concerned that they are no longer able to afford necessary treatments of their dogs.

On the positive side, the vast majority of dog owners, 92.3% of those surveyed, are prepared to regularly take preventive measures such as brushing their dog's teeth or ears. 82,8% of those surveyed have a home pharmacy for their dog. The products in the Canosept® home pharmacy are convincing and are recommended by 98.5% of users.

Canosept® Ear Cleaner

Dissolves wax and dirt in the dog’s ear, cleaning, deodorising and lipid-replenishing. For health of the dog, preventive treatment is an important care of the dog owner. Due to its ingredients, Canosept® is designed to remove greasy earwax, foreign bodies embedded and dirt from the skin in the ear through the ear washing method so that the dog can shake it out itself.

Canosept® Ear Cleaner 125 ml	
Art. 250654	
PU 6	4 019181 250643

Canosept® Ear Care Finger-Pads

Dog ears are extremely sensitive and should therefore only be cleaned and groomed with care. Regular use of Canosept® Ear Care Finger-Pads ensures a well care and hygiene of the dog’s ears. By using the specially developed finger pad, dog owners can intuitively follow the shape and movement of the dog’s ear. As an addition the Canosept® Ear Cleaner is a recommended solution.

Canosept® Ear Care Finger-Pads 50 pcs.	
Art. 250665	
PU 6	4 019181 206657

IN FOCUS Cleaning and care of the dog’s ear

As a rule, the dog’s ear has functioning self-cleaning mechanisms. The sebaceous and sweat glands of the outer ear canal produce earwax to remove dirt particles, dead skin cells and hair. The existing protective hairs also ensure the health of the sensitive sensory organs.

However, dogs’ ears have changed of evolution. Today, there are many different

ear shapes. This means that the self-cleaning mechanisms are no longer sufficient. Cleaning the dog’s ears therefore helps excess earwax, dirt and deposits that accumulate in the ear canals.

For this reason, dogs should be accustomed to touching, cleaning and and checking their ears from puppyhood.

Canosept® Eye Care and Tear Stain Remover

Canosept® Eye Care for dogs provides gentle cleaning and care for the eye area. It frees the eye area mild and perfume-free from dirt, dust, tear stains and other impurities. Ideal for sensitive and irritated skin. The pH-neutral formula based on hazelnut and cornflower extract has a very soothing effect and is ideal for regular and long-term use. It is also recommended to use Canosept® Eye Care as a preventative measure.

Canosept® Eye Care 120 ml	
Art. 250655	
PU 6	4 019181 250650

Canosept® Eye Care Pads

Canosept® Eye Care Pads gently clean and care for the area around the eyes. They remove dirt, dust, tear stains and other impurities from the eye area. Unsightly tear stains quickly become noticeable, particularly in the case of dogs with light or long coats. The regular removal of tear stains prevents the formation of tear stones. As an addition the Canosept® Eye Care is a recommended solution.

Canosept® Paw Care

Dog paws are heavily used every day and are exposed to various stresses and environmental influences such as heat, rough surfaces, ice, snow, road salt and cold all year round. Thanks to its balanced and special formula, Canosept® Paw Care for dogs is ideally suited to keeping dog paws supple and soft and protecting them from drying out and cracking. Various ingredients such as apricot oil and panthenol provide intensive moisture. As a preventative measure and for general care, it is recommend applying Canosept® Paw Care to the paws 2-3 times a week. For acute protection, Canosept® Paw Care can also be applied before a walk.

Sustainable mouth hygiene and dental health - a whole lifetime

According to a study by the German Society for veterinary dentistry, 80% of all dogs over the age of 3 years have dental problems, such as tartar or inflammation of the gums. 100% of these diseases have a negative effect on the well-being, general health and life expectancy of the animals. Prevention is therefore particularly important - ideally from puppyhood. With the Canosept® range of

dental care products we accompany the dog from puppyhood to senior age and ensure optimal dental hygiene for a whole lifetime. The wide range of products for improved dental and mouth hygiene have been developed with experts and veterinarians and can be combined according to individual preferences and needs.

Canosept® Dental Gel

Canosept® Dental Gel supports regular tooth cleaning, helps to remove plaque and ensures improved oral hygiene. It is suitable for adult dogs and puppies from 4 months of age. The formula with clove leaf and peppermint oil freshens the breath and helps to prevent tartar, tooth decay and bad breath. Without added sugar, fluoride or xylitol.

Canosept® Dental Gel 100 g	
Art. 250692

Canosept® 3-Headed Toothbrush

In the Canosept® 3-Headed Toothbrush, teeth can be cleaned effectively from all angles: The unique brush design makes it possible to thoroughly clean both the chewing surface and the sides of the teeth in one step. In addition, the ergonomic comfort handle makes handling easy and comfortable to use and even hard-to-reach areas are freed from plaque. Cleaning with the Canosept® 3-Headed Toothbrush helps to prevent inflammation and diseases in the oral cavity in the best possible way.

Canosept® Dental Care Kit

The Canosept® Dental Care Kit offers ideal all-round care for your dog’s dental care. Consisting of the 3-Headed Toothbrush, a Dental Care Finger Brush and the Dental Gel, the Canosept® Dental Care Kit provides optimal care and promotes oral hygiene.

Canosept® Dental Care Finger Brushes

The Canosept® Dental Care Finger Brush helps to prevent tartar, tooth decay and bad breath. It is also ideal for the dental care of small or sensitive dogs. The direct contact with the gums and teeth gives the dog owner a good feeling for the movement and there is no risk of injury in the mouth. Made from hard-wearing silicone, washable, recyclable and made without plasticisers.

Canosept® Dental Care Finger-Pads

Canosept® Dental Care Finger-Pads enable effective cleaning of the dog’s teeth and ensure good oral hygiene. They reduce plaque, build-up and promote fresh breath. The use of the specially shaped, practical finger pad ensures that the pet owner intuitively follows the dog’s teeth during cleaning and adapts to their movement.

Canosept® Tooth Spray

Canosept® Tooth Spray for dogs is used for the cleaning and care of the teeth and entire dentition of the dog. Due to the special composition and ingredients, the dog’s mouth odour is safely combated and eliminated and general oral hygiene is improved. After using Canosept® Tooth Spray, the dog’s tongue supports the good cleaning and care of teeth and gums.

*The first Canosept[®] dietetic
complementary feed for joints
and intestinal flora*

Canosept® complementary feed to promote mobility and intestinal flora

In addition to the dog's general physical condition, dental and oral hygiene, his mobility and immune system as well as the intestinal flora play a decisive role. Therefore the new Canosept® dietetic

complementary feed for joints and intestinal flora ideally complement the proven Canosept® Home Pharmacy.

Canosept® complementary feed stand for:

- Reliable dietetic complementary feed
- Unique Canosept® formulas with an optimal combination of valuable ingredients
- Excellent acceptance and very good compatibility
- Easy-to-use tablets that are good to divide and crush
- Recommended by veterinarians and developed with veterinarians

JOINT

Healthy joints are the basis for an active and fulfilling dog life. Only with intact joints he can explore his surroundings and fulfil his natural play instinct.

If a dog suffers from painful joint problems, this can affect their general well-being and quality of life. It is therefore very important to protect the health of the joints and prevent at an early stage.

90% of dogs over 5 years of age suffer from osteoarthritis

Osteoarthritis is generally regarded as a disease that occurs in older dogs. But this is a false assumption. This painful joint disease can occur at any age, even in puppies. Restricted movement in dogs often remain undetected for a long time.

Damaged articular cartilage can no longer be produced or be completely repaired. With the proper nutrition the joint health of the dog should therefore be promoted by important nutrients. The best thing is preventative measures, so that no complaints can occur.

INTESTINAL FLORA

Intestinal health is closely linked to a dog's general health and well-being. A healthy intestinal flora promotes digestion and can prevent digestive problems.

The intestine also plays a central role in the dog's immune system. A healthy intestinal flora helps to ward off harmful pathogens and reduce inflammation.

Around 80% of the cells that are important for the dog's immune system are found in the intestine

The risk of allergies can also be reduced by a healthy intestinal flora. In addition it also affects the dog's metabolism and weight management. A healthy intestinal flora reduces the absorption of substances that could be harmful to the body and need to be detoxified by the liver. There is an interaction between the intestine, intestinal flora and liver.

If a dog suddenly develops diarrhoea, most dog parents initially focus on stopping the diarrhoea. Often the cause is only suppressed. It is better to rebalance the dog's intestinal flora. For this, probiotics and prebiotics are the ideal support.

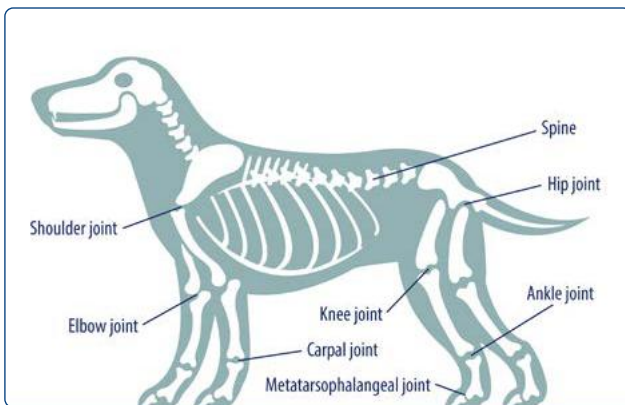

Canosept®
JOINT

Felisept[®]

*naturally
balanced*

WELL-BEING AND BALANCE FOR CATS

Felisept[®]

HOME
COMFORT

With real catnip

Every cat reacts differently to stress. One cat retreats and hides, another one conflicts and protests.

Felisept® has the optimal concentration of Nepeta cataria (real catnip) and the natural gift to rebalance cats in stressful situations. So your cat can be itself again - balanced, full of joie de vivre, affection and playfulness. Without pheromones. Recommended by veterinarians.

What causes stress in cats?

The everyday life of humans and cats together harbours stressful situations: the building site on the doorstep, new additions to the family, a move or simply a new piece of furniture can cause your cat stress. Even the necessary trip to the veterinarian or the new year's eve fireworks often cause anxiety. In multi-cat households, it is not uncommon for conflicts to arise between cats, as they encounter each other in close quarters on a daily basis.

How does real catnip work?

Felisept® Comfort products are the natural solution against stress reactions in cats. They ensure a lasting balance with the help of the natural active ingredient and the optimum concentration of Nepeta cataria (real catnip). Nepeta cataria is a plant from the labiate family, which also includes various types of mint.

Catnip has a pleasantly tart, lemony odour and reminds a bit of the scent of peppermint. Cats love catnip. The real catnip in Felisept® has a calming effect on cats and has a relaxing effect in both social and territorial stress situations. Your cat will quickly feel well and balanced again and can be itself - without pheromones.

Against scratching

Against urine marking

Against stress and fear

In clinical studies it was found that the special concentration of ingredients in Felisept® Comfort led to a decrease in signs of stress and an improvement in the balance of cats after only a few days. The studies showed that the effect on the cats increased the longer the product was used.

Felisept® products with 2-fold effect for more balance and to maintain the cat's unique character:

1. Reduces: Stress and aggression
Scratching and biting
Urine marking and urination
Insomnia and loss of appetite
Fears and hiding
2. Promotes: Making contact and playfulness
Harmony and balance
Well-being

Rack module Felisept®

Felisept® Home Comfort Diffuser Set

- Natural balance in the cat household
- With real catnip
- Without pheromones

CARE PRODUCTS FOR CATS

Felisept[®]

**THE NO. 1
HOME PHARMACY
FOR CATS**

The life of a cat is a daily adventure. Whether an outdoor or indoor cat, in addition to its own grooming, the cat should always be cleaned and cared for by humans.

Due to the significant increase in veterinary costs, it is also becoming increasingly important to preserve the cat's health. The home pharmacy from Felisept® offers every cat owner a complete range of products for the optimal care of the cat. All products in the Felisept® home pharmacy have been specially developed for the needs of cats together with veterinarians.

Equisept[®]

Purity. Care. Well-being.

H. LANGEHANENBERG

Equissept®

The high-quality Equissept® range includes products for the entire horse environment and ensures that horses feel comfortable all around.

The carefully compiled product range fulfils the highest quality standards. It was developed together with experts from the equestrian sports especially for the needs of horses and is recommended by veterinarians.

Pest removal

The horse and its environment provide good conditions for pests such as flies, horseflies, deerflies, ticks and mosquitoes and are annoying companions that impair the horse's well-being. Whether in the environment or directly on the horse, with Equissept® Pest Removal, horses are reliably protected from pests.

Care

Regular care is an integral part of everyday life with horses. It is part of the routine to keep the tail and mane supple and shiny and to treat small skin blisters in the best possible way. With the caring products from Equissept®, well-being is guaranteed.

Hygiene

With Equissept®, sources of dirt and odours are removed reliably and naturally. For a clean environment in the stables, boxes and horse transporters and for pore-deep cleaning of riding equipment, riding clothes, horse blankets and much more.

Application on
pets and in the
pet environment

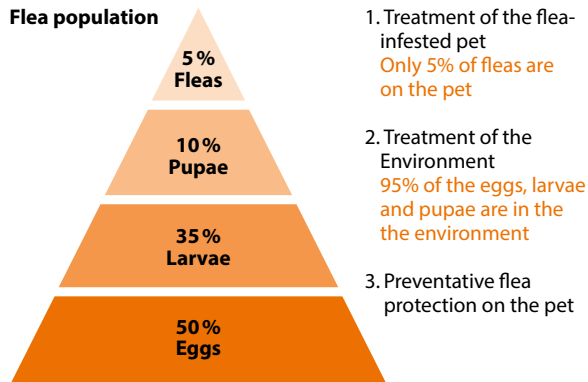

Fleas

Moisture and warmth are ideal factors for the development of the flea. In addition to the infestation of pets, they are mainly found in the pet environment in the form of eggs, larvae and pupae on furniture baskets or carpets. Fleas are capable to absorb 15 times their body weight in blood. An adult flea can live on its host for up to 133 days.

Fleas can cause skin irritations and allergies. They are also carriers of numerous pathogens, viruses, bacteria and tapeworms.

Flea population

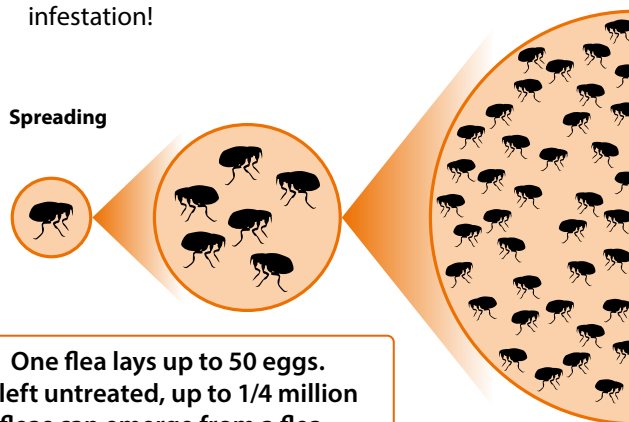

1. Treatment of the flea-infested pet
Only 5% of fleas are on the pet
2. Treatment of the Environment
95% of the eggs, larvae and pupae are in the environment
3. Preventative flea protection on the pet

Recognising flea infestation

- The pet scratches itself conspicuously often
- There are light and dark crumbs on the pet, these are flea faeces and eggs
- Rub the flea faeces with a moistened white cloth. If the cloth colours red, this indicates it is a flea infestation!

Spreading

One flea lays up to 50 eggs. If left untreated, up to 1/4 million fleas can emerge from a flea - infestation within 4 weeks.

Ticks

In our regions mainly the wood tick (*Ixodes ricinus*) and increasingly also the alluvial forest tick (*Dermacentor reticulatus*) occur. The ticks are well adapted to our climate zone. Ticks are so-called ambush hunters. There are sensory organs on their first pair of legs which perceive a potential host. The tick waits on plants, recognises a host animal or a human passing by and lets itself be stripped off. On the host the tick quickly looks for a suitable place to take blood.

The tick develops from egg, larvae and nymph to adult tick. Each stage of development requires a new host and blood intake (3-host tick). The blood meal of the tick is firmly cemented into the skin of the host over 2-3 days (larvae), 5 days (nymph) and 7-12 days for the adult female. Male ticks do not suck blood. A tick generation lasts at least 1.5, but usually 2-3 years. At each stage, the tick can survive for at least 1 year without a blood meal.

Medical significance

Skin wounds at the puncture site with secondary infection due to itching and scratching. Ticks are carriers of a variety

Removing ticks from pets

1. Keep the pet calm and stable.
2. Use tweezers to grasp the tick directly out of the pet's skin and pull it out.
3. Disinfect the bite site.

of pathogens to humans as well as to cats and dogs. The most important in humans are tick-borne encephalitis (FSME) caused by a virus tick-borne borreliosis (also known as Lyme disease). FSME and tick-borne borreliosis also occur in dogs. Studies have shown that a tick can contain up to 5 different pathogens and can therefore transmit them during the blood meal.

Year-round tick control is recommended.

ARDAP®

TICK AND FLEA PROTECTION

ARDAP® Tick Hook with Tweezer

- For problemless tick removal for dogs, cats and humans
- Made from high-quality stainless steel
- In a practical case

The faster and more carefully ticks are removed from the skin, the lower the risk of infection by transmissible pathogens. The ARDAP® Tick Hook with Tweezer is perfect for the quick and thorough removal of ticks and particularly practical thanks to its dual function:

1. The tweezer removes even the smallest tick larvae and nymphs, but also thorns and splinters, safe and and effortless.
2. The stable tick hook lifts larger ticks thoroughly and without residues.

In a protective case, the tick hook with tweezer is the ideal companion for on the road.

Tick tweezer - for small ticks, thorns and splinters

- Hold the affected area of skin flat so that the tick is easily accessible on the skin.
- Grasp the tick with the tweezer as close to the skin as possible.
- Pull the tick slowly and carefully upwards out of the skin.

Afterwards it is advisable to disinfect the area with alcohol or iodine.

Tick hook - for larger ticks

- Hold the affected area of skin flat so that the tick is easily accessible on the skin.
- Slide the V-shaped tick hook directly under the tick on the skin, until it is firmly clamped.
- Now pull the tick with a slight tug slowly and carefully out of the skin.

Afterwards it is advisable to disinfect the area with alcohol or iodine.

Recommendation for flea infestation:

Both the animal and the environment should be treated against fleas, as the parasites also infest sleeping areas, baskets and other places where pets like to spend time.

For application on pets the use of repellent flea protection products from ARDAP®, such as Spot-On, Collar or Shampoo and Spray are recommended. In addition the environment should be fogged with the ARDAP® Fogger so that flea eggs, larvae and pupae can successfully be combated. Baskets, cracks and joints can also be treated with the ARDAP® Long-term Flea Spray for the environment.

More information on the products can be found on pages 66/67.

ARDAP® Tick and Flea Protection Collar for cats

The active ingredients pyrethrum from the chrysanthemum flower and the chemically synthesised permethrin are due to their similar sounding often confused with each other. Both have a repellent effect on pests. The permethrin also has a killing effect on insects and arachnids. From their principles they are therefore very different.

Pyrethrum, or *Chrysanthemum cinerariaefolium* is a natural active ingredient which can only be extracted from the chrysanthemum plant. It is therefore ideal as an insect repellent for cats and dogs, small animals and birds.

ARDAP® Mite and Tick Spray for small animals and birds

ARDAP® GREEN products with diatomaceous earth control long-term arachnids such as red and northern (black) bird mites, ticks, bedbugs, woodlice and insects such as fleas, silverfish, ants and cockroaches. The active ingredient in ARDAP® GREEN is diatomaceous earth, a powdery substance from the shells of fossilised diatoms. The powder reaches even the smallest cracks due to its fine structure and dries out even the smallest and hidden pest through contact. ARDAP® GREEN is highly appreciated in bird and chicken husbandry.

ARDAP® GREEN Active Powder
Diatomaceous earth - pure substance

- For effective combat of crawling insects, bird mites and ants
- Ideal for bird and chicken conservation, for house, cellar, barn and garden
- For dusting or pouring on

ARDAP® GREEN Mite Spray

The red bird mite

(*Dermanyssus gallinae*)

- 0.7 - 1.0 mm in size
- Feeds on the host's blood
- Grey when sober, when saturated with blood the mites appear red
- Nocturnal, can not be found on the bird during the day
- Can survive for months without food
- Clutches contain up to 400 eggs
- Warm to hot temperatures favour reproduction
- Zoonotic significance, can infest humans

General information

The red mite seeks out sleeping birds in the dark to suck their blood. In daylight the mite hides in the immediate vicinity of the bird. In doing so, the parasite can infest hosts up to 80 cm away from the daytime hiding place. During the breeding season, the mite increasingly occupies the nesting opportunities. In order for the laid eggs to develop fully, a room temperature of at least 10 degrees is necessary. This is why the red mite is particularly common in summer. Under ideal conditions this cycle is completed within a week.

Evidence

An infestation is generally noticeable when the birds are resting at night. The birds are restless, shaking and poking around in their feathers with their beaks. Cracks, crevices and the inside of the perches should be checked regularly. Red bird mites can also be detected if the corners of the cage or aviary are prepared with transparent adhesive film. The mites stick to it during the night and can be clearly detected in this way.

The Northern bird mite

also known as the black bird mite

(*Ornithonyssus sylviarum*)

- 0.5 - 0.8 mm in size
- Feeds on the host's blood
- Black colouring
- Lives during all stages of development on the bird
- Mite population is limited to one bird
- Can survive for weeks without food
- Mild temperatures favour reproduction
- Zoonotic significance, can infest humans

General information

The Northern bird mite is a close relative of the red bird mite but is less widespread. In contrast to the red bird mite, the Northern bird mite spends its entire lifecycle on the bird. This cycle consists of egg, larvae, the nymphal stages and the adult mites. Under ideal conditions, this cycle is completed within one week.

Evidence

The Northern mite mainly lives on the contour feathers. If you blow on this feathers, the fast-moving parasites can be recognised as nimble black dots.

Symptoms and damage

Birds infested with mites appear dull and listless during the day and sleep conspicuously a lot. The skin itches due to the bites, which leads to increased scratching, picking at the plumage and plumage shaking. With an extremely large mite population, the birds can be weakened by blood loss. The increased blood loss can lead to the death of nestlings in extreme cases. There is also a risk that the stressed females leave the nest.

Combat

The most important precaution against bird mites is regular inspection of the cavities and keeping cleanliness in the animal's surroundings. Regular cleaning and treatment of the birds and their surroundings help to decimate the mite population. When treating the birds and surroundings, ensure that they are carried out completely and accurately, according to the manufacturer's instructions. If the dosage is too low, there is a risk of developing resistance.

A close-up, high-speed photograph of water splashing into a sink. The water is captured in mid-air, creating a dynamic and energetic scene with many small droplets and ripples. The overall color palette is a range of blues, from light sky blue to deep navy blue. In the top right corner, there is a solid dark blue rectangular shape.

Bactazol[®]

**The proven brand
for best hygiene
in households, practices
and animal husbandry**

Bactazol®

Hygiene for house, practice and animal husbandry

Bactazol® Hand Sanitiser

Bactazol® Hand Sanitiser protects effectively and reliably against viruses (enveloped RNA viruses), bacteria and fungi. Bactazol® Hand Sanitiser is an immediately effective, alcohol-based preparation, which can be used in all hygiene-relevant areas (e.g. in home disinfection, for the prevention of infections, when travelling or in commerce).

Bactazol® Hand Sanitiser 250 ml

Art. 250114

PU 6

Bactazol® was tested according to the test criteria of the DVG (German Veterinary Society) in a certified test laboratory for its effect against enveloped RNA viruses (so-called limited virucidal activity). In the test, Bactazol inactivated et al. the feline coronavirus (FeCoV) and thus has a disinfectant effect on surfaces against enveloped viruses.

Bactazol®

Hygiene for house, practice and animal husbandry

Bactazol® Sanitiser

With deodorising effect

- Extensive disinfecting effect
- Deodorises sustainably with aromatic freshness
- Protective effect

Bactazol® Sanitiser 250 ml

Bactazol® Universal Cleaner

Bactazol® Universal Cleaner for birds, small animals, dogs and cats is a highly effective, slightly alkaline, ready-to-use cleaning solution on an aqueous basis, which contains readily biodegradable surfactants and special additives. Due to its good creeping properties and low surface tension, even dried animal faeces are effectively wetted, allowing them to be removed easily. A pleasant lemon fragrance remains after cleaning.

Bactazol® Universal Cleaner is ideal for cleaning of

- Bird cages, nesting boxes, aviaries, feeders
- Small animal cages, small animal stables
- Dog kennels, catteries, dog sports clothing
- Cat litter boxes, cat baskets etc.

Bactazol® Universal Cleaner 500 ml

Hobby
Farming

♥ Joy in
your own
chicken farm

The proven Quiko® product line especially for chickens and poultry

Good feed and valuable dietary supplements for vital chickens

Chickens are frugal animals. They are very adaptable and, if kept in a species-appropriate well through all seasons.

A suitable, balanced nutrition keeps chickens and poultry vitality and ensures reliable laying performance. In addition to the basic nutrients of carbohydrates, fats and proteins, vitamins, minerals and trace elements are important such as iron, calcium, potassium and zinc.

Quiko® Hobby Farming supports the well-being and good development of chickens.

If chicken keepers know how their chickens behave, how they walk and how they peck, they will quickly recognise when something changes. Chickens are masters at covering up and never want to show weakness - it's in their nature and ultimately protects them from enemies.

So if you know your chickens well, you will also notice when their behaviour changes and it is possible to counteract emerging illnesses through the targeted use of medicinal herbs.

Good prevention is at least as important as contact with the chickens. Quiko® Hobby Farming products are developed in close co-operation with veterinarians and experts to support the well-being and good development of chickens.

For protection against vermin, especially mites, ARDAP® GREEN diatomaceous earth products are excellent suitable.

More information on this from page 68.

ARDAP® GREEN products with diatomaceous earth provide long-term control of arachnids such as the red and northern (black) bird mite, ticks, bedbugs, woodlice and insects such as fleas, silverfish, ants and cockroaches.

Thanks to its very fine structure, the diatomaceous earth powder reaches even the smallest cracks. Through contact with the white diatomaceous earth film even the smallest and hidden pest dries out. The products are used, for example, in highly valued bird and chicken farming.

ARDAP® GREEN Active Powder

Diatomaceous earth - pure substance

- For effective control of crawling insects, red bird mites and ants
- Ideal for bird and chicken farming, for houses, cellar, barn and garden
- Suitable for dusting or pouring on

Vitacombex[®]

THE ARDAP CARE BRANDS
FOR BIRD BREEDERS
PROVEN FOR OVER 50 YEARS

Quiko® Classic - Proven eggfood for all ornamental birds

Countless German and world champion titles are the best proof of the outstanding quality of this eggfood. Quiko® Classic is a complementary pet food for ornamental birds and can be fed all year round.

The specially baked biscuit with a high egg content is a source of protein for young birds. In the rearing as well as during moulting periods as a condition feed the combination of egg biscuit, honey and vitamins in Quiko® Classic guarantees excellent breeding and show results.

Quiko® Classic is available in four packaging sizes, where the 5 kg bucket is filled with five 1 kg bags, guaranteeing fresh feed at all times.

During the breeding period, Quiko® Classic should be fed slightly moistened every day during the breeding period. During the show and moulting period, Quiko® Classic is fed 2 to 3 times a week as condition feed.

TIP!
To keep the eggfood moist throughout the day and even the smallest parts easier to eat, we recommend the addition of moistened Quiko® Rusk!

A varied nutrition is particularly important to keep the birds healthy.

Grain feed contains less protein and essential vitamins. Pelleted and heated feed does not offer any variety and is only accepted by birds. It is therefore advisable to supplement conventional food with Quiko® Eggfood to increase the protein and vitamin intake. As most birds eat the Eggfood first, it is ideal for adding vitamins or medication if required.
