

Paper Flowers

Cut strips of cardstock 3" - 3.5" x 12"

Thread wire or pipe cleaner through the holes in the button by coming up through one hole and back down through a second hole and then twisting the wire underneath to hold the button on.

Next make parallel cuts on the long edge of each paper strip leaving about 1" uncut at the top.

Take your cut strip of paper and with the decorative side on the inside roll tightly around your wire stem and button. (the button should be facing the fringed side of the paper strip)

After you have wound the paper all around the stem, wrap the bottom with tape, you can use any kind of tape, if you have washi tape this works well because it is decorative. If you do not have tape you can take the little piece of ribbon provided in this kit and tie it tightly around the paper and stem just underneath where the petals start.

Here is the link with more photos and directions if you wish to take a look.
