[32-bit version of Gimp 2.8 for Mac OSX 10.6.8](#)

Hello,

I have a very old MacBook Pro that has the 32-bit intel chip. I downloaded the native Mac OSX build of Gimp 2.8.2 but it doesn't start. The console shows error messages of the form:

```
8/30/12 8:54:25 PM [0x0-0x4d04d].com.gnomw.Gimp[2215] /Applications/GIMP.app/Contents/MacOS/GIMP: line 74: /Applications/GIMP.app/Contents/MacOS/GIMP-bin: Bad CPU type in executable
```

And indeed, when I check the filetype on all the files in the /Applications/GIMP.app/Contents/MacOS directory I see the following:

```
GIMP-bin: Mach-O 64-bit executable x86_64python: Mach-O 64-bit executable x86_64
```

So, is there an i386 version of GIMP-bin available for download? I'm running Snow Leopard 10.6.8 and I can't upgrade any further because I'm stuck on the old 32-bit chip.

Thanks,

Catherine

Hi Catherine,

sorry, that your question laid around so long without an answer. There's a bugticket for this in our bugtracker. You can watch it on [1].

Kind regards,

Sven

Hi GIMP Community,

I'm brand new to this user list, and I had a question about the new 2.10release. I know there's a direct download available for Windows and Linux,but when can we expect a macOS direct download for GIMP 2.10?

ThanksJake

The GIMP community does not seem to care about OS X. But a version for OS X is available via MacPorts (www.macports.org). IMHO, wait until 2.10.2 will be released and stay with 2.8 until then - YMMV.

'The GIMP community' does not care, seem is not applicable, for any distroor operating system. 'The GIMP community' does not package or providepackages for *any* operating system or distro. individuals donating theirtime package gimp for . if gimp is not available or the version you wish is not available, contact thepackager for your system and beg him to update his packages, or pay him orpackage it yourself, or install via source code, or just do without. itis free and open source software.

now you know and will not disseminate false and mis-leading information.

For a 2.10 working version on OSX <https://www.partha.com/>
Works great, you just need to watch which version of OSX you are using and Multi Threading as you may need to change that setting in Prefs .

Go to partha.com and download a full fledged package including a lot of extras. Available since years...

Sent from a mobile device.

So, the 'Gimp community' should look behind its back, because some miscreants have create a 'download.gimp.org' site where you can find read-to-install versions of Gimp 2.8 for Windows and OSX, and of Gimp 2.10 for Windows.

Isn't that a bit misleading, too?

you mis-read or mis-understand. I did not say the 'gimp community' didnot care but said that saying the lower case gimp community did not carefor any distro or operating was not applicable. also that the lower casegimp community did not package gimp for install.

perhaps now you understand.

[User Manual]

Hope I won't go OT (or, at least, not too much...)

Anyway, I'm on OsX and I'm using Partha's Gimp version (which run great :) !)

I was just wondering if anything is doable about an up-to-date version of the User Manual...

So far, the only way I was/am able to have offline help while using Gimp was: - to create a 'help' folder [share → gimp → 2.0] - to copy in it a folder (downloaded can't_even_remember_where o.O) containing .html copies of the whole 2.8 GIMP User Manual (<https://docs.gimp.org/2.8/it/>)

Actually I've copied these files and I'm still using them, but I see an updated version of the Manual is out (<https://docs.gimp.org/2.10/it/>)... so, is there any known way to use it offline?

Thanks for help!
