

Dyna Standard/Big Inch/Shorty/Full lengths Two Piece bracket assembly/ For Mid controls

The new two piece bracket design will allow for multiple adjustable angles for all designs of our Dyna standard and Big inch system, Short and Full lengths.

You now have adjustability to tilt the bracket up and down on the transmission, and back and forth on the transmission which will allow for the different lengths we offer.

The most important adjustment is the two piece part that allows for the bracket to swing in and out on multiple angles to allow for the differences in muffler cone lengths and the angles of those cones.

We have supplied a small tube of red lock tight that should be used **ONLY** on the two bolts that hold the two piece bracket together after you have finalized the correct angle.

Below are images of all the adjustments that are available on the two piece bracket

Supplied Parts

- (1) Assembled 2 piece bracket
- (2) 5/16 x 3/4 bolts
- (2) 5/16 serrated flange lock nuts (Standard)
- (1) 5/16 flange nut welded tab (Big Inch)
- (1) 0.06 FL OZ tube of threadlocker
