ELECTRICAL ACCESS DOOR

Thank you for choosing Signature Streetscapes. The machine cut electrical access door is provided as a hand-hole opening to an electrician to make wiring connections after the street lamp is securely install onto a concrete pylon or direct buried. The 2" x 4" rectangular opening has been carefully deburred prior to powder coating to assure safety of the installer. Once wires are connect, the gasketed, weather-resistant cover fit over the opening and fastens using (2)10-24 x 3/4" tamper-resistant stainless-steel button head machine screws. The special hex wrench provided can be used to tighten and loosen screws as necessary.
