Wasp/Hornet Trap

Wasp invasion is a very common problem for beekeepers and when this happens you may lose your hive of bees and your honey. A sugary solution is placed in the bottom of the container and helps lure the wasps. The entrance of the trap is a cone design which allows the wasp to enter the container but not exit. The entrance is also designed so that a honey bee may enter and exit the trap and therefore they do not get trapped inside.Also available for hornets.

This machine has 2 functions:

WR FDUU\ RXW WKH SURFHVV RI FUHDPLQJ KRQH\
WR KHDW DQG 0HOW FU\VWDOOL]HG +RQH\

The heating tank of these machines have heating cables placed around the drum which allow for a uniform and consistent heating. This device also has a temperature controller which prevents the honey from overheating. It is made of stainless steel which is designed to create precise creamed honey using temperatures of up to 40°C. This process changes the honey from crystallized to liquid. When the process is complete the honey reaches a consistency similar to butter.

All machines are 240V power with temperature control 30°C - 70°C

Candle Moulds & Wicks

Price

Per 10 Metre: €2.50
Per 50 Metre: €10.00

Round Candle Wick

Choosing the correct wick size depends on the size of the diameter of the resulting candle. With cast or drawn candles the wick thickness and diameter of the candle are equal. Example: for a candle of diameter 1cm, the wick thickness is no. 1. If the diameter of the candle is halfway between 2 wick thicknesses always choose the ZLGHU ZLFN 7KLV HQVXUHV WKH FDQGOH VWD\V EXUQLQJ ZKHQ OLW (DPSOH IRU WKLFNQHVV LV QR

When rolling candles from beeswax sheets double the diameter of the candle to determine the wick size required. The wick must also be dipped.
