ES **Consejos de limpieza y mantenimiento**

Es conveniente realizar limpiezas con frecuencia y no una limpieza en profundidad en mayores espacios de tiempo. A pesar de las características de resistencia de las superficies, la suciedad al cabo del tiempo tiende a incrustarse. Para evitar tener que recurrir a productos de limpieza excesivamente agresivos es preferible realizar limpiezas frecuentes, antes que profundas con carácter esporádico. El mantenimiento es sencillo. Sin embargo desaconsejamos el uso de ciertos utensilios y productos que jamás se deben emplear para su limpieza, como pudieran ser: objetos punzantes, estropajos con una superficie áspera, disolventes, lejías, quitaesmaltes, vinagres, ácidos cítricos, productos abrasivos, abrillantadores, etc. No emplee vaporetas para la limpieza. La presión de trabajo de estas máquinas provoca que el vapor de agua penetre en los materiales y produzca una hinchazón que deteriora la madera. Para la eliminación de motas de polvo, manchas de grasa o huellas dactilares, disuelva jabón neutro en un recipiente de agua templada. Limpie los muebles con una bayeta humedecida, secando a continuación todas las superficies, especialmente las esquinas, con un paño suave, limpio y seco. En caso de duda sobre la reacción de un producto de limpieza elegido sobre una superficie, recomendamos hacer unas pruebas en un sitio menos visible para comprobar posibles alteraciones de color y otros efectos.

EN **Cleaning and maintenance tips**

It is advisable to clean frequently instead of doing it more thoroughly at longer intervals. In spite of the endurance of the surfaces, dirt tends to build up over time. In order to void the use of abrasive cleaning products, clean it regularly at short intervals. The maintenance is quite simple. However, when cleaning them, you should never use such utensils and cleaning products as sharp objects, rough scouring pads, solvents, bleach, nail polish remover, vinegar, citric acid, abrasive products, polishes, etc. Please do not use steam machines for cleaning. Pressure makes the water steam get into de materials and makes them swell damaging the wood. To eliminate dust, grease stains or fingerprints, dissolve some mild soap in a container of warm water. Wipe the cabinets with a damp cloth and then dry all surfaces, specially the corners, with a soft clean dry cloth. If you have any doubts about the effect a cleaning product might have on a surface, we recommend trying it in a less visible place to check for any changes in colour or other alterations.

FR **Conseils de nettoyage et entretien**

Il est préférable d'effectuer des nettoyages réguliers et fréquents, plutôt que des grandes opérations de nettoyage plus profondes mais aussi moins fréquentes. Malgré les caractéristiques de haute résistance des surfaces, avec les temps, la saleté finie par s'incruster, et ceci provoque l'utilisation de produits de nettoyage beaucoup plus agressifs qui peuvent les endommager. L'entretien est très facile, mais il est fortement déconseillé l'emploi de certains produits et outils comme: objets pointus, chiffons rugueux, dissolvants, eau de javelle, vinaigre, acides citriques, produits abrasifs, produits qui font briller, etc. N'employez pas des machines à vapeur pour nettoyer. La pression de travail de ces machines fait que la vapeur d'eau pénètre dans les matériaux et un gonflement qu'abîme le bois. Pour éliminer la poussière, les taches de graisse ou empreintes digitales, veuillez dissoudre du savon neutre dans de l'eau tiède. Nettoyer les meubles avec une éponge humide puis séchez toutes les surfaces, surtout les coins, avec un chiffon propre et sec. Pour assurer que le produit est approprié pour le nettoyage, nous vous conseillons de le tester sur la partie la moins visible en sorte de vérifier les possibles altérations des couleurs ou autres possibles effets.

IT **Consigli utili per la pulizia e la manutenzione**

È conveniente pulire con frequenza piuttosto che fare una pulizia a fondo più di rado. Nonostante le caratteristiche di resistenza delle superfici, con il tempo lo sporco tende ad attaccarsi. Per evitare di dover ricorrere a prodotti pulenti eccessivamente aggressivi, è preferibile pulire più spesso piuttosto che fare una pulizia a fondo sporadicamente. La manutenzione è semplice. Tuttavia, vi sono alcuni utensili e prodotti che non si devono mai utilizzare per la pulizia: oggetti acuminati, pagliette e spugnette dalla superficie ruvida, solventi, candeggina, acetone, aceto, acido citrico, prodotti abrasivi, lucidanti, ecc. Non usare pulitrici a vapore: data la pressione d'esercizio di queste macchine, il vapore acqueo penetra nei materiali e ne provoca il rigonfiamento danneggiando il legno. Per rimuovere granelli di polvere, macchie di grasso o impronte digitali, sciogliere un po' di sapone neutro in un recipiente contenente acqua tiepida. Pulire i mobili con un pannospugna inumidito e quindi asciugare tutte le superfici, insistendo negli angoli, con un panno morbido, pulito e asciutto. In caso di dubbio riguardo alla reazione del prodotto pulente prescelto su una superficie, si consiglia di fare una prova in un sito meno visibile per accertarsi che non si verifichino eventuali alterazioni del colore e altri effetti indesiderati.

DE **Reinigungs- und Pflegetipps**

Holzflächen sind sehr beständig gegen Verschmutzung. Da sich Schmutz aber mit der Zeit festsetzt, sind häufigere Reinigungen besser als eine Großreinigung in längeren Abständen. So vermeiden Sie die Verwendung von aggressiven Reinigungsmitteln. Die Pflege von Holzflächen ist einfach. Bitte verwenden Sie keine spitzen Gegenstände oder raue Scheuerschwämme sowie keine Lösungsmittel, Bleichmittel, Nagellackentferner, Essig, Zitronensäure, Scheuermittel, Poliermittel, etc. Auch Dampfdruckreiniger sind ungeeignet. Durch den hohen Betriebsdruck dieser Geräte dringt Wasser in die Materialien ein. Das Holz quillt auf und verdirbt. Zur Beseitigung von Staubkörnern, Fettflecken oder Fingerabdrücken lösen Sie etwas Neutralseife in einem Gefäß mit lauwarmem Wasser. Reinigen Sie die Möbel mit einem feuchten Lappen, trocknen Sie anschließend alle Flächen (insbesondere die Ecken) mit einem weichen, trockenen und sauberen Tuch ab. In Zweifelsfällen über die Wirkung eines Reinigungsmittels sollten Sie zunächst an einer weniger sichtbaren Stelle prüfen, ob das Mittel Farbveränderungen oder sonstige unerwünschte Wirkungen hervorruft.
