Care and Maintenance

Hospitality glassware handles a heavy workload, and while our ranges are designed for such usage, some **simple steps** can be taken to **prolong the life of your products** significantly.

The Top 3 Reasons Glass Breaks:

1. Stacking glasses which are not designed to be stacked
2. Thermal shock when ice is added to a glass that has not reached room temperature after washing
3. Mechanical shock caused by minute abrasions from contact with foreign objects such as cutlery and muddlers

Correct storage and stacking, washing, drink preparation, and serving can minimise glass breakage:

WASHING:

- Rinse glasses as soon as possible after use and don't leave soiled for long periods.
- Use dishwasher racks designed for commercial use.
- Stack glassware away from dinnerware and cutlery.
- Ensure glasses don't come in contact with each other in glass racks.

DRINK PREPARATION:

- Before use, make sure glasses are room temperature.
- If being used for hot beverages, gently heat first.
- Pour ice into glasses using plastic scoops.
- Keep glass rims clear of taps and dispensers.

SERVICE:

- Never serve chipped or cracked glassware.
- Consider collecting no more than one glass at a time or without clashing glasses together.
- Hold stemmed glasses by the stem when polishing or pouring to avoid stress on the body of the glass.

STORAGE:

- Store glassware in plastic or coated glass racks.
- Make sure glasses aren't touching.
- Don't stack glasses on top of each other.
- Don't store glasses until they've cooled, particularly not in refrigerated storage.
