

# Foot ROM measurements made easy

## Innovative technology for feet range of motion

Accurate measurement of ankle and foot range of motion is a critical part of clinical decision making when treating conditions affecting the lower limbs. Measuring foot range of motion can be quite challenging with traditional tools.

EasyAngle replaces traditional tools with a single easy to use device that can measure any joint in any plane. Accurate to within one degree, EasyAngle has been utilized in many clinical studies and has been validated for both inter- and intra-rater reliability.

-  Efficient workflow
-  Single hand use
-  Saves time

-  Accurate within 1°
-  Patient friendly
-  Easy patient feedback

### Traditional goniometer

Measures flexion and extension  
Requires two hands  
Difficult to read

### EasyAngle Digital goniometer

Measures flexion, extension and rotation  
Leaves a hand free to support patient  
Easy to read display
