CREATE MAGIC.

Located in Southern California, Bishop Rotary has been the leader in Rotary Tattoo Machines since 2008.

As a tattooer with over 25 years of experience, Franco Vescovi started machine building in 1993. This was done by taking apart a tape player to build his first rotary machine with his brother using parts from local hardware store. In 2008, Franco revisited the idea of machine making - to see how it could be done better - when he created the first Bishop Rotary. This was at a time when only a few rotary companies existed in the world.

In an industry that was once dominated by coil machines, Bishop Rotary had the goal to create a better machine by using precision designed parts along with the finest motors in the world. Franco felt the performance of the rotary machine was superior because of the consistency in the hit from the motor and less trauma to the skin. He also believed the lightweight machines would combat carpal tunnel syndrome and help artists worldwide tattoo longer without pain.

Today, Bishop Rotary consists of Franco and his amazing team of machine builders, engineers, and dedicated staff, all who work tirelessly to provide tattoo machines and innovative products that meet the demands of our artists while enhancing the experience for your clients. Bishop Rotary is a true artist-owned company that knows what you need and we are honored to provide it.

THANK YOU KINDLY

Franco Vescovi
