

POWERLOCK CLAMPS

Product Information

Powerlock clamps are for use on PVC suction hoses with a convulater cover. These fittings come in two different configurations. Left hand and right hand spiral. To determine which style is required look at the end of the hose: if the spiral helix runs in a clockwise direction (to the right), a right clamp is required. If the helix runs counter clockwise (to the left), a counter clockwise or left hand clamp should be used. These clamps are manufactured from plated steel. the spiral steel fits between the helices and creates a seal when tightened.

Notes

Kuritec- counter clockwise (left hand) Kanaflex, Pac Echo- clockwise (right hand)

Parts No. Left	Parts No. Right	Hose I.D. Inches
PLCL-1.5	PLCR-1.5	1-1/2
PLCL-2	PLCR-2	2
PLCL-2.5	PLCR-2.5	2-1/2
PLCL-3	PLCR-3	3
