What is Biomaster Antimicrobial Protection?

cleanslaytz® products are treated with anti-microbial silver ion technology which inhibits the growth of bacteria. The technology is built into the cleanslaytz® products during manufacture without affecting their appearance.

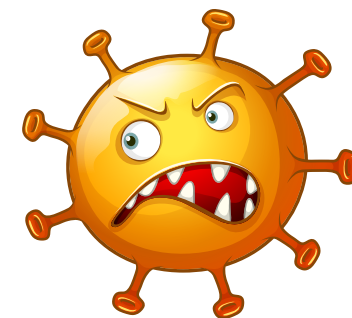

Biomaster provides a release of silver ions on demand, safely inhibiting bacterial growth.

The slow release of the active silver ingredient give the whiteboards maximum long term activity.

Biomaster antimicrobial additives can be processed at temperatures up to 600°C without losing their antimicrobial properties.

Is Biomaster safe?

Yes! It's based on Silver ion technology recognised for centuries with no harmful effects. Biomaster is used in medical food and water applications.

*SARS-CoV-2 is the virus that causes Covid19 and is a member of the Coronavirus family of viruses.

How effective is Biomaster?

Extremely! Biomaster is proven to inhibit the growth of microbes by up to 99.9%.

The facts

Respiratory viruses can be transmitted when someone touches a contaminated surface. Recent studies show Coronaviruses can remain active on surfaces such as metal, glass, wood, textiles, plastic and paper surfaces for several hours or even a number of days. **cleanslaytz**[®] products self-sanitise without affecting appearance or performance.

Here's the science bit

Unlike antibiotics, micro-organisms are unable to build up a resilience to the way in which silver ions disrupt their growth.

- Silver ions bind to the cell wall of the micro-organism, preventing growth.
- Silver ions interrupt enzyme production, stopping microbes from producing energy.
- Silver ions interrupt the cells DNA, preventing DNA replication and new cell growth.

How do cleanslaytz® products work

cleanslaytz® protective coating binds to the cell wall disrupting growth.

Biomaster® has been repeatedly tested to ISO standards and undergoes on-going quality control and environmental trials

the ions in the protective coating interfere with enzyme production stopping the cell producing energy

cleanslaytz® protective coating interrupts the cells DNA preventing replication

What you need to know about our Antibacterial Whiteboards

- **cleanslaytz**[®] whiteboards pro-actively prevent/disrupt the growth of bacteria on treated surfaces.
- **cleanslaytz**[®] reduces the load of infection causing bacteria on surfaces.
- **cleanslaytz**[®] whiteboards are more hygienic than regular boards.
- **cleanslaytz**[®] whiteboards are completely safe to use in the same environment as food and water.
- **cleanslaytz**[®] antibacterial whiteboards have been independently tested to ISO 22196 and ISO 21702 and found to be effective at reducing SARS-CoV-2 by 99% after 6 hours.
- **cleanslaytz**[®] products work 24/7 to protect surfaces.
- **cleanslaytz**[®] whiteboards antibacterial properties will stay effective for the life of the product. They will never wear off or leach out.
