

Download Microsoft Exchange For Mac

1. To download the latest version of Exchange, see Updates for Exchange Server. For information about keyboard shortcuts that may apply to the procedures in this topic, see Keyboard shortcuts in the Exchange admin center.
 2. How to Add Exchange Email to Mac. If you haven’t already, download and install Spark mail app on your Mac to get started. If you’re already using Spark and want to add a Exchange account, follow these instructions here instead. Launch Spark for Mac; Click on “Start using Spark” on the welcome screen.

 2. [Download Microsoft Word For Mac](#)
 3. [Download Microsoft Office For Mac](#)

The existing Outlook Mac uses Exchange Web Services (EWS) which is being phased out. Outlook on Windows generally uses MAPI over HTTP, perhaps the nearest thing to a native Exchange protocol. Microsoft is not happy with either and for its 'modern' mail client in Windows 8 and Windows 10 it developed a new sync protocol.

1. If you haven’t already, download and install Spark mail app on your Mac to get started. If you’re already using Spark and want to add a Exchange account, follow these instructions here instead.
2. Launch Spark for Mac
3. Click on “Start using Spark” on the welcome screen.
4. Type in your email address, tick the checkbox next to “I agree to the Spark Terms of Use and Privacy Policy” and click on the “Next” button.
5. On the next screen, enter your Exchange password and click Next. Then, click on the blue ‘Allow’ button to grant Spark access to your email account, so you can use your Exchange within Spark.

That’s it! There are no Settings to configure and no servers to specify. Just sign into your Exchange account and start using Spark for Mac.

How to Add Exchange Email to Spark for Mac

If you are already using Spark Mail app on your Mac and want to add your Exchange account, simply follow these steps.

1. Launch Spark for Mac
2. At the top left of your screen, click on “Spark” > “Add Account...”
