## Main Features

The RV-6 is a multi-function high-quality reverb that packs studio-level quality into a compact pedal.
Cutting-edge digital technology provides a total of eight modes, which include standard reverb as well as types that are immediately usable for live performance or recording.
The optimal reverb is automatically output according to the in/out connections. You can also use an expression pedal to control the reverb depth while you perform.

## Panel Descriptions

DC IN jack
Accepts connection of an AC Adaptor (PSA series; optional). By using an AC Adaptor, you can play
without being concerned about how much battery power you have left.

* Use only the specified AC adaptor (PSA series; sold separately), and connect it to an AC outlet
of the correct voltage. Do not use any other AC adaptor, since this may cause malfunction.
* If the AC adaptor is connected while a battery is installed, the power
supply is drawn from the AC adaptor.
* We recommend that you keep batteries installed in the unit even
though you'll be powering it with the AC adaptor. That way, you'll
be able to continue a performance even if the cord of the AC
adaptor gets accidently disconnected from the unit.
E. LEVEL knob
Adjusts the volume of the reverb sound.
TONE knob
Adjusts the tone color of the reverb sound.
OUTPUT jacks A (MONO)/B
These output jacks can be connected to
an amplifier or another effect unit.

## Precautions When Connecting

* To prevent malfunction and equipment failure, always turn down the volume, and turn off all the units before making any connections.
* Once the connections have been completed, turn on power to your various devices in the order specified. By turning on or damage to speakers and other devices.
When powering up: Turn on the power to your guitar amp last.
When powering down: Turn off the power to your guitar amp first.

This unit is equipped with a protection circuit. A brief interval (a few seconds) after power up is required before the unit will operate normally.

* Immediately after the unit is powered-on, the effect is on.

## Use of Battery

* A battery was installed in the unit before it left the factory. The A bettery was installed in the unit before it efft the factory. The purpose was to enable testing.
* If you handle batteries improperly, you risk explosion and fluid leakage. Make sure that you carefully observe all of the items " "IMPORTANT NOTES" (supplied O a sepate shet)
ar When operating on battery power only, the unit's indicator will
become dim when battery power gets too low. Replace the become dim when battery p
battery as soon as possible.
* Batteries should always be installed or replaced before connecting any other devices. This way, you can prevent malfunction and damage.
* If operating this unit on battery, please use alkaline battery.

## Changing the Battery

1. Hold down the pedal and loosen the thumbscrew, then open the pedal upward.
The pedal can be opened without detaching the thumbscrew completely.

2. Remove the old battery from the battery housing, and remove the snap cord connected to it.
3. Connect the snap cord to the new battery, and place the battery inside the battery housing
Be sure to carefully observe the battery's polarity (+ versus -).
4. Slip the coil spring onto the spring base on the back of the pedal, and then close the pedal.
Carefully avoid getting the snap cord caught in the pedal, coil spring, and battery housing.
5. Finally, insert the thumbscrew into the guide bush hole and fasten it securely.

INPUT Jacks/OUTPUT Jacks
■ Mono input $\rightarrow$ Mono output

Stereo input $\rightarrow$ Stereo output

Outputting only the reverb sound

By plugging into INPUT-B, you can have only the reverb sound be output (the direct sound is not output).

* When the effect is off, the output from OUTPUT-A (MONO) and OUTPUT-B is muted.
