

Before using this unit, carefully read the sections entitled: "USING THE UNIT SAFELY" and "IMPORTANT NOTES" (supplied on a separate sheet). After reading, keep the document(s) where it will be available for immediate reference.

A battery is supplied with the unit. The life of this battery may be limited, however, since its primary purpose was to enable testing.

Main Features

- High Brightness mode enhances meter visibility outdoors.
- Accu-Pitch Sign function uses the motion of the meter's lights to show when tuning is completed.
- Guitar/Bass mode lets you tune by string number, with support for 7-string guitars and 6-string basses.
- Flat tuning is supported with Guitar Flat mode, which allows for "down" tunings up to six semitones below standard pitch.
- Switching on the tuner automatically mutes the output signal, allowing you to tune without outputting the sound.

How to Use the Tuner

- 1. Connect the guitar or bass you want to tune to the INPUT jack.** (This switches on the power.)
- 2. Press the pedal switch to turn the tuner on.** The CHECK indicator will light.
- 3. Play a single note on your guitar or bass, and tune it.** The note name or string number closest to the tone being played appears in the display. Tune the instrument so that both Tuning Guide indicators are lit and the center of the meter is lit green. (Cent display)
The meter will light farther toward the left as the pitch gets flatter, or farther toward the right as the pitch gets sharper.

- * When the Accu-Pitch Sign function is on, the meter lights stream toward the center of the display when stable tuning at the correct pitch is reached.
- * The meter behavior described here is when the CENT display is selected (the factory setting). The behavior is different when you've selected the STREAM display.
- * The sound from the OUTPUT jack is muted when the tuner is on.

Convenient Functions

Having the Meter Indicate Completion of Tuning (Accu-Pitch Sign function)

When the Accu-Pitch Sign function is on, the meter lights stream toward the center of the display when stable tuning at the correct pitch is reached.

- 1. While holding down the STREAM/CENT button, turn on the power (insert a plug into the INPUT jack).**
 - 2. Press the STREAM/CENT button again to toggle the Accu-Pitch Sign function on/off.**
 - On:** The meter lights stream to the center from the left and right.
 - Off:** The meter lights up at the left and right.
- * The TU-3 returns to its normal state when several seconds have elapsed without the STREAM/CENT button being pressed.
 - * This setting remains stored even after the power is turned off.

Changing the Reference Pitch

You can adjust the reference pitch over a range of 436–445 Hz.
* 440 Hz is the factory default.

- 1. Press the MODE button and STREAM/CENT button simultaneously.** The lowest digit of the current reference pitch (e.g., "0" when set to 440 Hz) blinks in the Note Name/String indicator.
 - 2. Press the MODE button or STREAM/CENT button to change the reference pitch.**
 - MODE button:** Raises the reference pitch by 1 Hz.
 - STREAM/CENT button:** Lowers the reference pitch by 1 Hz.
- * If you allow several seconds to elapse without pressing the MODE button or STREAM/CENT button, the TU-3 will return to normal operation.
 - * When you turn on the power, the current reference pitch will be displayed for several seconds.
 - * This setting remains stored even after the power is turned off.

Changing the Meter's Brightness (High Brightness mode)

By switching the meter to High Brightness mode, you can increase its visibility when performing outdoors.
To switch to High Brightness mode, hold down the STREAM/CENT button for two seconds or longer. To return to normal brightness, hold down the STREAM/CENT for two seconds or longer once again.

Panel Descriptions

- 1. CHECK Indicator**
This indicator shows whether the effect is on or off, and also doubles as the battery check indicator.
* If you're powering the unit with a battery and the CHECK indicator goes dim—or doesn't light at all—when you try to turn the effect on, the battery is near depletion and should be replaced. For instructions on changing the battery, refer to "Changing the Battery."
 - 2. Tuning Guide Indicator**
Indicates when the proper tuning is reached.
- | | | |
|----------------------|-------------------------|-----------------------|
| Pitch is flat | Pitch is in tune | Pitch is sharp |
| | | |

- 3. Meter**
Indicates the tuning of the input sound's pitch.
 - 4. STREAM/CENT button**
Switches the meter's display pattern.
* This setting remains stored even after the power is turned off.
- CENT display**
The meter lights farther toward the left as the pitch gets flatter, or farther toward the right as the pitch gets sharper. When the pitch is correct, the center of the meter lights green.
* The center of the meter and the tuning guide indicator remain lit for several seconds after you've selected this setting.

- STREAM display**
The meter lights stream toward the left if the input pitch is flat, or toward the right if the input pitch is sharp. The lights flow more slowly as the pitch discrepancy decreases, and stop flowing when the pitch is exact.
* The meter lights stream toward the left for several seconds after you've selected this setting.

- 5. Note Name/String Number Indicator**
Indicates the note name, string number, or reference pitch.
- Note indicator**
- | | | | | | | | |
|---|---|---|---|---|---|---|----|
| C | D | E | F | G | A | B | C# |
| C | d | e | f | g | a | b | C# |
- # (Dot LED lit)

- 6. MODE Button**
The tuning mode changes each time you press the MODE button. The meter lights at the position of the currently selected mode.
* When you turn on the power, the current tuning mode will be displayed for several seconds.
* This setting remains stored even after the power is turned off.
- In this example, the Tuning mode is set to GUITAR.

Mode	Explanation	Indicator Status
Chromatic	Lets you tune all twelve chromatic steps of the octave.	The note name is displayed.
Chromatic flat	Lets you tune one semitone lower (♭) or two semitones lower (2).	
Guitar	Lets you tune by guitar string numbers.	The guitar string number is displayed. (7th string is displayed as "7.")
Guitar flat	Lets you tune one semitone lower (♭) or anywhere from two to six semitones lower (2–6).	
Bass	Lets you tune by bass string numbers.	The bass string number is displayed. (Hi-C string is displayed as "C," Lo-B string is displayed as "b.")
Bass flat	Lets you tune one semitone lower (♭) two semitones lower (2), or three semitones lower (3).	

- 7. INPUT Jack**
Connect the guitar or bass guitar to be tuned here.
* The INPUT jack doubles as the power switch. Power to the unit is turned on when you plug into the INPUT jack; the power is turned off when the cable is unplugged.
- 8. OUTPUT Jack**
Connect an effects processor, guitar amp, or other such device here.
* The output is muted when the tuner is on.
- 9. BYPASS Jack**
Connect an effects processor, guitar amp, or other such device here.
This jack will always output the signal from the instrument connected to the Input jack.
Use this jack if you want to be heard while you tune.
- 10. Pedal Switch**
This switch turns the effect on/off.
- 11. Thumbscrew**
When this screw is loosened, the pedal will open, allowing you to change the battery.
For instructions on changing the battery, refer to "Changing the Battery."

- 12. DC OUT Jack**
When an AC adaptor is used, you can connect a PCS-20A parallel DC cord (optional) to supply power to effects processors and other PSA adaptor-compatible gear.
* Power cannot be supplied from the DC OUT jack when the TU-3 is running on batteries.
* The PSA series includes two different adaptor types; one with a maximum output current of 200 mA (0.2 A) and the other 500 mA (0.5 A). If you use the PCS-20A to supply power to devices that are compatible with PSA adaptors, make sure that the total current consumption of all devices (including the TU-3) does not exceed the maximum output current of the PSA series unit you're using. The maximum output current is listed in the OUTPUT field of the label affixed to the adaptor itself.

- 13. AC Adaptor Jack**
Accepts connection of an AC Adaptor (PSA series: optional). By using an AC Adaptor, you can play without being concerned about how much battery power you have left.
* Use only the specified AC adaptor (PSA series), and connect it to an AC outlet of the correct voltage. Do not use any other AC adaptor, since this may cause malfunction.
* We recommend that you keep batteries installed in the unit even if you'll be powering it with the AC adaptor. That way, you'll be able to continue a performance even if the cord of the AC adaptor gets accidentally disconnected from the unit.

Precautions When Connecting

- To prevent malfunction and/or damage to speakers or other devices, always turn down the volume, and turn off the power on all devices before making any connections.
 - Some connection cables contain resistors. When connection cables with resistors are used, the sound level may be extremely low, or impossible to hear. For information on cable specifications, contact the manufacturer of the cable.
 - If you'll be using the TU-3 for an extended time, we recommend that you use an AC adaptor.
 - Once the connections have been completed, turn on power to your various devices in the order specified. By turning on devices in the wrong order, you risk causing malfunction and/or damage to speakers and other devices.
- When powering up:** Turn on the power to your guitar amp last.
When powering down: Turn off the power to your guitar amp first.
- This unit is equipped with a protection circuit. A brief interval (a few seconds) after power up is required before the unit will operate normally.
 - When operating on battery power only, the unit's indicator will become dim when battery power gets too low. Replace the battery as soon as possible.

Changing the Battery

When the indicator goes dim or no longer lights while the effect is on, it means that the battery must be replaced.
Replace the battery following the steps below.

* Please be sure to read the separate sheet "USING THE UNIT SAFELY" for details on battery handling.

- 1. Hold down the pedal and loosen the thumbscrew, then open the pedal upward.**
* The pedal can be opened without detaching the thumbscrew completely.
- 2. Remove the old battery from the battery housing, and remove the snap cord connected to it.**
- 3. Connect the snap cord to the new battery, and place the battery inside the battery housing.**
* Be sure to carefully observe the battery's polarity (+ versus -).
- 4. Slip the coil spring onto the spring base on the back of the pedal, and then close the pedal.**
* Carefully avoid getting the snap cord caught in the pedal, coil spring, and battery housing.
- 5. Finally, insert the thumbscrew into the guide bush hole and fasten it securely.**

Storefront Demo Display

- 1. While holding down the STREAM/CENT button and Pedal switch, turn the power on (insert a plug into the INPUT jack).** The storefront display appears.
The storefront display remains until you turn the TU-3's power off and then on again, or until you press the Pedal switch.

Specification

Tuning Range	C0 (16.35 Hz)–C8 (4186 Hz)
Reference Pitch	A4 = 436–445 Hz (1 Hz step)
Tuning Accuracy	±1 cent
Power Supply	DC 9 V: Dry battery 6F22 (9 V) type (carbon), Dry battery 6LR61 (9 V) type (alkaline), AC Adaptor (PSA series: optional)
Current Draw	30 mA (DC 9 V) 85 mA (DC 9 V, when High Brightness mode is on)
Dimensions	73 (W) x 129 (D) x 59 (H) mm 2-7/8 (W) x 5-1/8 (D) x 2-3/8 (H) inches
Weight	390 g / 14 oz (including battery)
Accessories	Owner's Manual, Leaflet ("USING THE UNIT SAFELY," "IMPORTANT NOTES," and "Information"), Dry battery/9 V type (6F22)
Options	AC adaptor: PSA series Parallel DC cord: PCS-20A

* Duration of continuous use with battery operation: These figures will vary depending on the actual conditions of use.

Battery	When the tuner is continuously on		When the tuner is on for one minute and off for three minutes	
	When High Brightness mode is off	When High Brightness mode is on	When High Brightness mode is off	When High Brightness mode is on
Carbon	3.5 hours	0.5 hours	5 hours	1.5 hours
Alkaline	10.5 hours	3 hours	21 hours	9.5 hours

- * If you use the unit with High Brightness mode turned on, we recommend that you use an alkaline battery.
- * The battery that was supplied with the unit is for temporary use, intended primarily for testing the unit's operation.
- * This document explains the specifications of the product at the time that the document was issued. For the latest information, refer to the Roland website.
