## Pull out Kitchen Faucet

Notes before installation:

1.Please check that all components are present.

2.Before installation ensure that all feed lines are clear of debris and on/off valve is present.

3.Ensures water pressure is between 20-125 PSI(includes combination of hot and cold feed lines).

4. Pictures in the manual are general in content and may not represent exactly your purchased faucet. If youare having difficulties please contact a professional plumber.

5.If you will be away from home for an extended period you should shut off the main water supply.

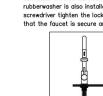

1.Remove locking-nut,metal and rubber washer and hose connector if installed.

2.Install faucet through center hole, re-install rubber and metal washer follower by the lock—nut.Re—install hose connector if removed insuring small rubberwasher is also installed.Using a screwdriver tighten the lock-nut screws so that the faucet is secure and will not twist.

3. Tighten pull-out hose into the copper

4.Screw and hand tighten the hot and cold flexible lines to the corresponding faucet connectors. Using a wrench ensure that connectors. Using a wrench ensure that the copper faucets lines are stable as you tighten the braided feed lines.

5.Proper installation of the hose weight kit 6.Attach flexible hose to water supply. Will ensure that the spray head retracts smoothly.On the spray side of the hose,

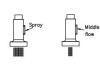

measure 15" down from the body of the flucet.Install the hose weight kit at this point.Pull out on the spray head.It should move easily and retract smoothly. Reposition the hose weight kit as necessary.

7.Hold on the spray—head hose,unscrew spray head and remove it along with the rubber washer. Turn on the faucet to flush the hose and feed line for 1-minute to flush debris.Turn off faucet and re-install the rubber washer and spray head.
