

A SOLUTION FOR EVERY SPILL

We all know that the incorrect storage and/or poor management of liquids can have far reaching consequences for the environment, health, safety and a business' bottom line. When a spill does occur, you need to be sure that you and your staff know how to respond quickly and appropriately.

Not all spills are the same and that is why we offer a range of [absorbent types](#) to suit the wide range of applications found in businesses and the environment today. Oil spills on water or land based spills that happen when it's raining are best dealt with using [oil selective](#) products which repel the water but absorb the spilt oil. These products are colour coded white to make it easy to see that the product is working and they stand out in the local environment.

Spills of known hazardous chemicals or liquids that you are uncertain about should be dealt with using products from our [chemical](#) absorbent range, which are colour coded yellow making them highly visible and is easy to identify with a hazardous spill.

For "housekeeping" in and around plant and machinery where you are likely to be using oils, coolants, cutting fluids, water/water based products and mild solvents, our [maintenance](#) range is perfect for pro-active use. They contain and absorb day-to-day "production" overspray, leaks, drips and spills. Colour coded grey these products blend into the working environment.

THE EMPTTEEZY WAY TO BE PREPARED

Choosing a [Spill Kit](#) can be tricky. Ask yourself:

- Does the spill kit need to be mobile, static or easy to carry?
- What size of kit do you need for a specific area?
- What absorbent capacity do you really need?
- Did you know that you should locate spill kits both in the potential spill area and remote from it?

FREE SITE ASSESSMENT

The questions can seem never ending, so we aim to help you select the right products for requirements by offering a [free site assessment](#) service.

This provides you with bespoke and confidential advice on the right products and ensure compliance with latest legislation.
