

Self-Close Corrosive Waste Can - 12161

Manufactured from high density “natural” polyethylene, this container has been specifically designed to resist acids and caustics. The translucent nature of the material allows you to see the level of the liquid inside the container, which helps reduce the risk of over filling. The fittings of the self-closing lid are stainless steel and this model has a “wide mouth” 37mm opening as standard. It is for use with non-flammables.

SPECIFICATION

Capacity	4ltr
Size	117mm x 194mm x 324mm H
Colour	Translucent white
